Battery Replacement Instructions

1. Remove one set (2) batteries from their plastic cavity, taking care to dispose of the plastic protective sheet between the two batteries.

2. Place your thumb at the end of the light base and use the grip ridges to slide the battery tray out of the light. Note the (+) and (-) markings on the tray.

3. Flip the tray and place the two batteries so their polarity (+, -) aligns with the markings on the underside of the tray.

4. Flip the tray back over. Support the batteries with your fingers and slide the tray back into the light, with the grip ridges sliding into place on the front of the light.
