Quiet as the evening breeze Almost as green

For millennia, man has harnessed natural ventilation to keep his dwellings cool. Yet contemporary houses ignore this idea, relying instead on creating a sealed and expensively conditioned environment. AirScape uses modern technology to bring the ancient wisdom of natural ventilation to your home.

An AirScape whole house fan can reduce or even eliminate the need for A/C and dramatically lower home energy use.

Especially in dry climates where evenings cool off, it just makes sense to harness cool air as nature provides it, rather than expensively manufacturing your own. Our advanced design delivers effective natural cooling with whisper-quiet efficiency, at

a fraction of the cost of A/C.

HOW IT WORKS

While traditional whole house fans are big noisy brutes, our unique designs are modern, energy-efficient and very quiet. AirScape fans are designed to run all night, steadily drawing cool fresh air in through open windows while pushing hot stale air out through existing roof vents.

This soft quiet flow creates a comfortable, natural living and sleeping environment while drawing heat out of the structure to reduce A/C load for the next day.

Conserve energy. Save money. Help the planet. You'll be thrilled that you did.

Installing an AirScape may be one of the best energy-saving opportunities in your home. Plus, payback on equipment is much faster than solar. And of course, reducing electricity use means reducing CO₂ emissions — so you're doing good for our planet.

AirScape also pays big in comfort and quality-of-life. Over 80% of surveyed users say their AirScape **absolutely** adds to the enjoyment of their home. Over 85% report being **thrilled** or **very satisfied** with their AirScape.

Comparing home energy savings & payback

*Figures use assumptions based on both internal tests and public domain data — see our web site for details.
Actual results may vary depending on climate, house design and other factors.*

About AirScape

Natural cooling has a key role to play as we move toward sustainable housing —reducing home energy use while increasing air quality, livability and comfort. AirScape designs & manufactures advanced whole house ventilation appliances that get rave customer reviews for being smartly designed, robustly built, easy to install, energy efficient and ultra quiet.

AirScape products are available direct to consumers at airscapefans.com.
