

EFITMENT Jumping Mat Troubleshooting Guide for A024 Trampolines

EFITMENT A024 Trampoline Rebounder

Thank you for selecting the A024 Trampoline Rebounder by EFITMENT. As a distributor and importer of health and fitness products, we are committed to provide you complete customer satisfaction. We have designed this troubleshooting manual to guide you through the process of attaching the jumping mat onto the EFitment A024 Trampoline Rebounder.

You will not need any tools to install the jumping mat on the trampoline. For additional assistance, email service@efitment.com.

First: Set the jumping mat in the middle of the A024 trampoline frame. The EFITMENT logo on the jumping mat should face up-right as seen in **Figure 1**.

Second: Using the jumping mat, connect four of the security rope ties to form a cross shape around the trampoline's steel rim as pictured in **Figure 2**. Each rope should have one end connected to a plastic hook. Individually tug the four security ropes firmly. Once stretched, wrap the rope around the steel frame and attach it to the plastic hook.

Third: After the cross shape has been formed with the jumping mat, secure the remaining 29 security ropes to the steel frame of the trampoline. Tug each security rope firmly before attaching it to the plastic hook. Leave at least two inch of space between each segment of wrapped security rope as seen in **Figure 3** and **Figure 4**.

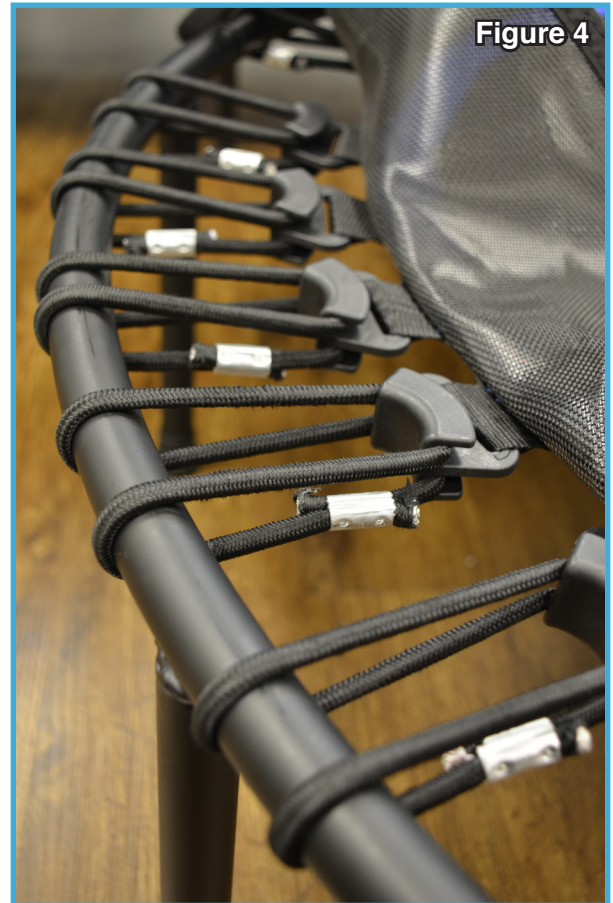

Figure 4

Fourth: After you have installed the 32 security ropes to the steel frame, pull the elastic straps at the bottom of the jumping mat, and attach them to the plastic hooks that are located underneath the mat. After you attach the elastic straps, the jumping mat is installed. See **Figure 6**.
