Delivering the Benefits You Want, Cost-Effectively

The Avaya 6200 Series Analog Telephones provide the business calling features you count on, at a price that makes good business sense. These telephones give you precisely the control you want, with the quality and built-in reliability you expect.

The 6200 Series telephones provide the right combination of flexibility and ease of use to deliver benefits you want and expect for your business communications. For example:

- Place a caller on hold to consult with a co-worker or gather information, then pick up the call from the same set or extension, with *Set Hold*.
- Extend your communications system voice messaging to your analog sets, with *Message Waiting* capabilities.
- Save time in repeat dialing with *Redial*, which lets users automatically call back the most recent telephone number dialed, with just a touch of a button.
- Use special features that are part of your communications switch with the *Flash* function. It tells the switch that a user is activating a special feature, not terminating the call and requiring a dial tone.

- Easily connect a fax machine, modem, or laptop computer through your 6211, 6219, or 6221 telephone and its built-in *Data Jack*.
- Increase productivity by moving smoothly and easily from one call to the next, with *Positive Disconnect*. It ensures that your communications system knows when a dial tone for a new call should be delivered—so users can quickly make or take another call.

Additional Capabilities of the 6219 and 6221

Some of the 6200 Analog Telephone models include additional *built-in* functionality that delivers exceptional benefits for your business:

- Get the convenience of hands-free talking, with a built-in *Speakerphone* in the 6221 telephone set.
- “Turn off” background noise or conduct a side conversation while listening to a call, using the *Mute* feature of the 6221 set. It lets you block out noise at your end of a call while allowing the person at the other end to continue speaking uninterrupted.
- With the 6219 or 6221 set, you can give a caller music-on-hold (if provided by the switch) by administering the Hold button as *System Hold*.
- Get fast, easy one-touch dialing for your frequently called numbers, with *Repertory Dialing* in the 6219 and 6221. You can program up to ten telephone numbers, with up to 24 digits or elements each, and “lock” them into the system using *Program Keylock*.
- When users need to be alerted that a particular telephone is ringing, they can simply flip a switch to select one of two distinctive rings for an individual 6219 or 6221 telephone, with *Personalized Ringing*.
