

Carbon Emission Statement for Hiromi Paper, Inc.

At Hiromi Paper, Inc., we recognize the importance of sustainability and environmental stewardship in the art industry. As a supplier of paper and art supplies for fine art and art restoration purposes, we are committed to reducing our carbon emissions and mitigating the impact of our operations on the environment. Our carbon emission statement outlines our efforts and initiatives in this regard.

1. **Carbon Footprint Assessment:** We have conducted a comprehensive assessment of our carbon footprint, taking into account our manufacturing processes, transportation, and packaging. This assessment has provided us with a clear understanding of our current emissions and areas where improvements can be made.
2. **Energy Efficiency Measures:** We are actively implementing energy-efficient practices in our manufacturing facilities and offices. This includes the use of energy-saving technologies, such as LED lighting, efficient machinery, and optimized heating, ventilation, and air conditioning (HVAC) systems. By reducing our energy consumption, we are minimizing our carbon emissions.
3. **Sustainable Material Selection:** We prioritize the use of environmentally friendly materials in our product offerings. We work closely with our suppliers to ensure that the materials used in our art supplies have minimal environmental impact. This includes selecting sustainably sourced wood for brushes and easels, water-based and non-toxic paints, and recyclable packaging materials.
4. **Supply Chain Optimization:** We are committed to optimizing our supply chain to reduce transportation-related emissions. This involves working with local suppliers whenever possible, consolidating shipments to minimize the number of deliveries, and exploring alternative transportation options such as electric vehicles or low-emission carriers.
5. **Recycling and Waste Management:** We have implemented robust recycling and waste management practices throughout our operations. We encourage our employees to recycle materials properly and strive to minimize waste generation. Additionally, we actively seek opportunities to recycle or repurpose any waste generated during our manufacturing processes.
6. **Carbon Offsetting:** While we aim to minimize our carbon emissions internally, we also recognize the importance of offsetting the emissions we cannot currently eliminate. We invest in certified carbon offset projects that support renewable energy development, reforestation efforts, and other initiatives that have a positive environmental impact.
7. **Continuous Improvement and Awareness:** We are dedicated to continuous improvement in our sustainability practices. We regularly review our processes, technologies, and initiatives to identify areas for further optimization and reduction of carbon emissions. We also prioritize raising awareness among our employees, customers, and stakeholders about the importance of environmental sustainability and encourage them to join us in our efforts.

By adhering to these principles and taking concrete actions, we strive to minimize our carbon footprint and contribute to a more sustainable future for the art industry and the planet as a whole.

Hiromi Paper, Inc. is committed to transparency and regularly monitors and reports on our progress in reducing carbon emissions. We believe that by working together, we can make a significant difference in preserving the environment for future generations.
