

## How to Change the Minimum Set Temp Thermotec Inverter Heat Pumps

### Overview

On the Thermotec Inverter heat pumps, the default lowest set water temperature is +15c

On koi ponds, often the owners want to keep the pond at +10 to +12c in winter

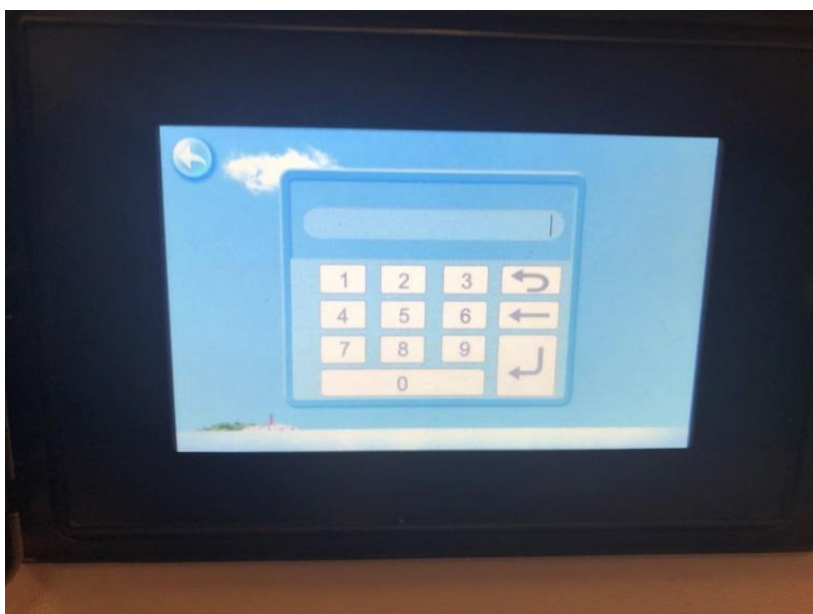

This guide shows you how to change the lowest set temperature from +15c to +10c

### Procedure

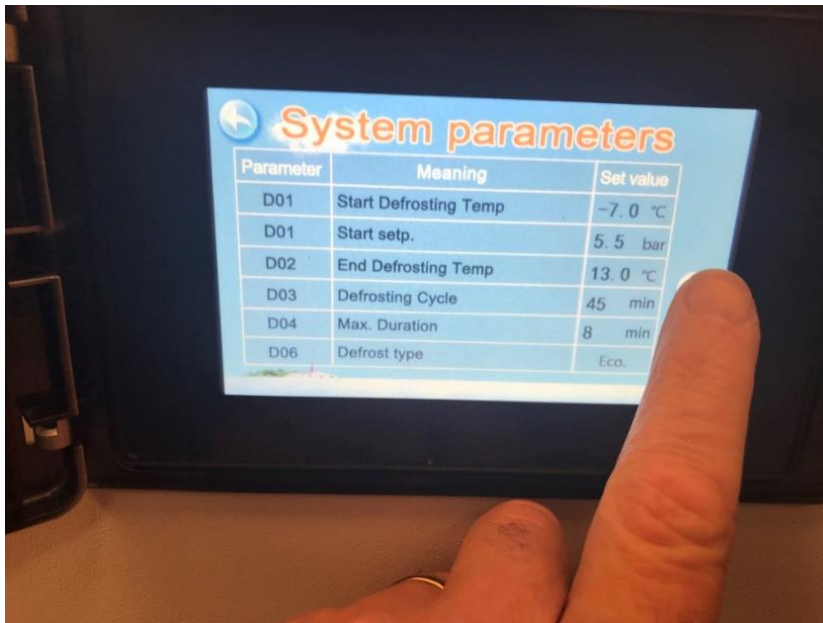

At the home screen, press on the cog icon

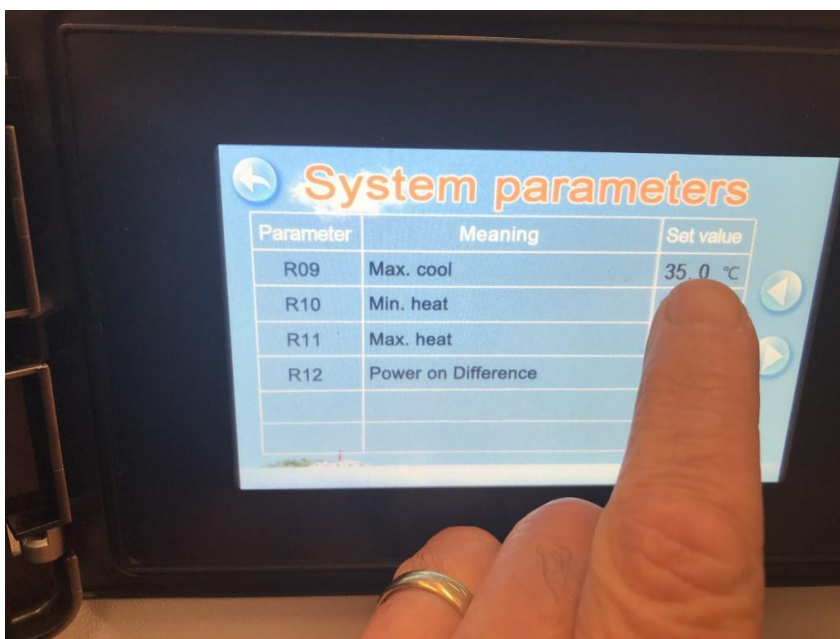

Enter the access code of 66

Press the right button to scroll through the parameters to parameter **R10**

Click on the value for **R10** which is normally on 15

Change the value from 15 to 10

Exit back to the home screen

You should now be able to set the desired water temperature to +10c

Note: We do not recommend that you set this to lower than +10c
