

Hazardous Material Removal

Application Description

Removal of coatings that contain hazardous materials, such as lead and asbestos. Common materials include lead paint (coatings) and asbestos, among others.

Benefits of Water

Conventional blasting creates hazardous dust particles that can be inhaled by operators. Water jetting instead wets the material, causing it to fall to the ground where it can be easily and quickly collected without becoming an airborne hazard.

Recommended Equipment

Pump System

40k @ 8 gpm for hard material

20k @ 17 gpm

10k @ 33 gpm for soft material

Tool System

Miniscrubber

Rotary Gun

Dynamo (manual, electric driven) and Vacuum

Dump Gun

Accessories

Flow Splitter

Diverter Valve
