Always pushing the limits

Whether curbs, thresholds or small ledges: With SMOOV you get through your day effortlessly and save your strength.

A power assist like no other has arrived. SMOOV by Alber is changing the way we use a manual wheelchair FOREVER!

This super light, 7.2kg motor can tackle grass, thick carpet, 16% inclines at a max 10km/h without breaking a sweat. Did we mention the EPIC 20km range on a full charge!!!!

The SMOOV features a single powerful wheel that connects onto the rear axel of a wheelchair and swivels 360deg meaning you can't even tell when it's on your wheelchair. You can connect the wheel whilst you're sitting in your wheelchair.

The controller connects onto the front frame of your wheelchair and is used to set the speed and stop the motor! The LED even shows how much battery you have and the rear LED lights up red for safety in the dark!

The tyre tread makes sure that you reach your destination safely by creating traction on rubble, wet roads and slippery floors. You're now able to use your hands for other tasks like sipping on your late and grocery shopping!

Key Features:

- Quick assembly
- Easy to connect and disconnect onto your wheelchair
- Light and compact
- High-quality materials
- Weight of just 7.2 kg
- 10 km/h maximum speed
- Integrated battery
