

We asked our gloves what they wanted in a microlight, and their answer was simple. An easy to use, customizable and affordable chip. We listened. The ezLite features 20 custom colors, 3 awesome modes (Hyper Strobe, Strobe, Strobie), and the most user-friendly interface out there. You can create 3 color combinations to your hearts desire, and even learn how to "conjure" with ClickSwitch. The ezLite comes ready to go out-of-the-box, perfect for gloves who love to customize without having to program a bunch of different modes.

Features to Customize

- 1 Master Color Set (1-3 colors)
- "ClickSwitch" Technology

Default Modes + Colors:

Normal Operation: Your ezLite comes pre-programmed with 3 different color sets across 3 different modes right out of the box.

1. Click the button to turn the light on.
2. Click to scroll through your 3 modes. They will display in order: Hyper Strobe, Strobe and Strobie.
3. In any mode, hold the button to turn off the light.

Choosing Your Colors: Your ezLite comes with 20 programmable colors built in, and allows one set of 3 colors to be programmed at a time. You can choose your mode settings on the fly, but changing your color set requires a full reset.

1. When the light is off, hold the button until you see quick, **orange** flashes. Let go of the button. You are now in color set selection mode.
2. Click the button to cycle between the 20 available colors. When you have reached your desired color, hold the button until the light flashes off and back on. You have now selected your first color out of three available slots.
3. After all 3 color slots are full, your light will turn off. When you turn it back on, you will see your color set.

ClickSwitch to "Conjure": Instead of using all 3 modes in sequence, you can now set the light to turn on and off in just one mode. We call it "ClickSwitch." This gives you the ability to create masterful illusions by switching the lights on and off in various patterns. Watch Munch's show "Lust" on the AmazingLights Youtube Channel to see the magic!

1. Click to turn the light on.
2. Click to choose the mode that you want to conjure with.
3. Hold the button until you see **green** flashes. Then release.
4. Now, your light will turn on and off in the selected mode with a single click. You're ready to conjure.
5. To return to 3-Mode function, turn the light on, and hold until you see **green** flashes again. Then release.

Master Reset:

1. When the light is off, hold the button until you see 10 **white** flashes. You will have to hold the button down even after the first 10 **orange** flashes. It will be reset to factory default color sets (RGB).
