

1: The measurement around the headrest
This is to ensure that we know where to stitch the velcro

2: The width of the top of the headrest (Front or back)

3: The width of the widest part of the headrest (Front or back)

4: A photo of the side profile of the headrest that we will use to draw the shape of the side profile in cad. We will also need the measurement for the width of the panel and the height if possible.

5: Finally we will need the width between the headrest stalks
