

Soy Candle Care

- » Trim wick to 1/4 inch before each lighting.
- » Let candle burn until entire top is melted to avoid tunneling**
- » Do not burn candle for more than 4 hours at a time.
- » Keep out of direct sunlight, soy wax can discolor.
- » Never leave a burning candle unattended.
- » Keep candle away from drafts, children and pets.
- » Clean your jar with warm soapy water to be re-used.

**Soy candles have a memory

When burning your soy candle for the first time, it is important to allow the candle to burn long enough for the wax to fully melt across the width of the candle. By allowing your soy candle to create its initial memory burn, it will ensure a full melt pool of wax, and increase the candle's scent throw. Depending on various factors (temperature of room, fragrance) it can take 2 1/2-3 hours to reach a complete melt pool. The general rule is to allow the melt pool to get approx. 1/4" deep.
