# Lamp Module LM465

Setting The Module's Code

Using a small screwdriver, set the red House Code dial to the same letter as your Controllers. Set the Black Unit Code dial to any unused number.

Ratings

The Lamp Module can be used to control an incandescent lamp rated up to 300W. It is not suitable for other types of lamps such as fluorescent or energy saving lamps, low voltage lamps, or lamps that include a dimmer control. **Caution:** Do not connect an appliance such as a coffee pot or heater to a Lamp Module. It may damage the Module and/or the appliance and could cause a fire hazard. Use an Appliance Module instead.

1 Set the House Code and Unit Code.

2 Plug a lamp into the Module.

3 Plug the Module into the same wall outlet as your controller (see testing below).

Testing The Module

Make sure the lamp's switch is on. Plug the Module into the same wall outlet as your controller, press the On and Off buttons on the controller that correspond to the Unit Code setting on the Module. If the Module turns on and off you can unplug the Module or Controller and move it to its permanent location. If you can't control the module, visit: **www.x10.com/support** for help.
