ARCKIT®

Hello,

Welcome to your new A500 kit!

I hope that it sparks many moments of imaginative play and wonderment whether you're building alone, together with family and friends, in your classroom or design studio.

As an architect, I had an idea to create an easier and more affordable way of building scaled architectural models other than by cutting and gluing materials together for one time usage. The result is Arckit, a collection of reconfigurable, interconnecting components inspired by real modular building methods that let you continuously explore and visualise your architectural ideas with speed and precision.

At the very heart of Arckit is an entirely 'open-ended' tool kit of parts for all ages and which encourages learning while having fun. Each component has multiple uses and every kit has a myriad of design possibilities for you to reveal, allowing you to freely express your designs without limitations or restrictions of instructions. I liken Arckit to any instrument, the more you engage with it, the more proficient you become and the more amazing undiscovered creations you will start to bring to life.

Happy Building!

Damien

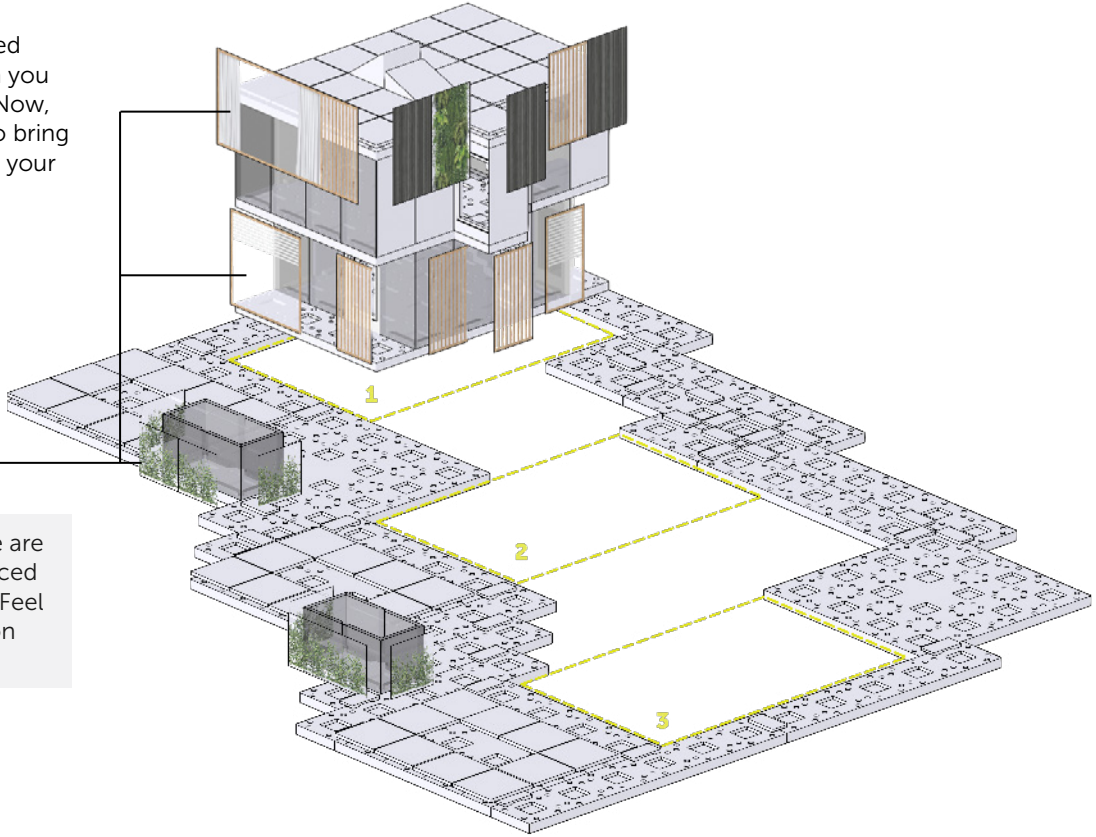
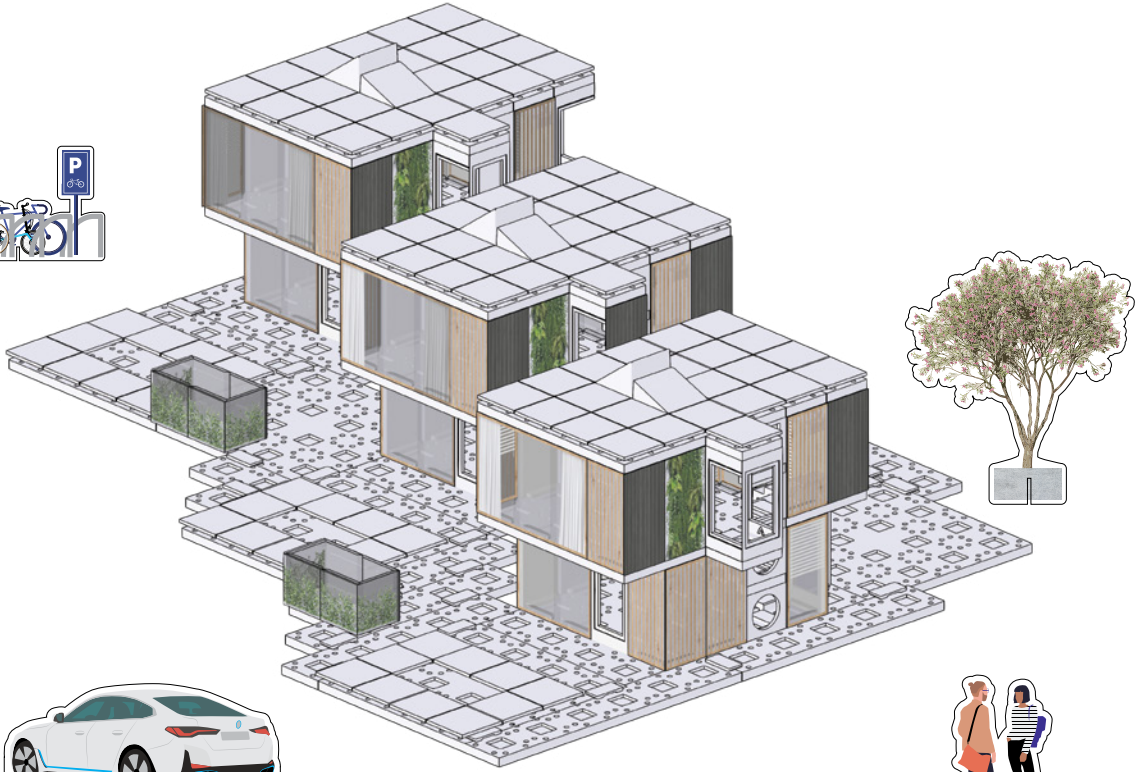
Bring it to life

CONGRATULATIONS! You finished your first sample buildings which you can slot into place as indicated. Now, use your A500 Accessories Set to bring storytelling, scenery and scale to your development.



All the Arckitexture decals here are reusable and can be easily placed on solid and clear wall panels. Feel free to apply them anywhere on your model.



Slot the pop-out elements together to stand upright.

Share your creations

We love to see what our community is building, so why not share your creations with the world and let's inspire one another!

Be part of our Community Builds Gallery by tagging @arckitmodel and adding #arckit to your posts. You can also reach us at info@arckit.com
