

INSPIRE GIRLS TO BE ACTIVE IN SCIENCE,
TECHNOLOGY, ENGINEERING AND MATH (STEM)

MISSION: MAKERGIRL aims to inspire girls aged 7-10 years old about Science, Technology, Engineering and Math (STEM), by offering sessions led by university women experienced with STEM. All of our sessions inspire girls to develop their creativity and technical skills through 3D printing and other cutting edge technologies. Girls design and print an object and learn about women leaders and innovative companies in STEM. Our mission is that MakerGirls become the driving impact for equality and diversity in both education and the workplace because they live and dream as unstoppable forces who say “Yes” to the STEM challenges of the future!
