

GZila Clamp Size Ruler

1. Print out this PDF (see below).
2. Cut out the ruler sides.
3. Cut out the section labeled "CUT OUT THIS AREA".
4. Tape the end of the ruler perpendicular to your tubing.
5. Wrap the paper snugly around the tubing and back onto itself.
6. You will see the green line thru the cut out window.
7. Identify your tubing size.

Our clamps do factor in oversized thickness for powder coating. So your actual measurement may come to be a smidge bigger than the ruler shows.

*The file must be printed actual size 100%. Do not use the "fit to page" or "shrink oversized pages" as it will make the ruler inaccurate. We suggest using a tape measure or ruler you have to confirm the scale is printed correctly otherwise it will not be accurate.
