

WELCOME TO PROGRESSIVE SMOOTHING

Q-Smooth by Lubricity Labs

How to Apply

1. Shampoo with Lubricity Labs Q-Shampoo. Rinse.
2. Shake Q-Smooth bottle well. **In place of conditioner**, generously apply Q-Smooth to hair (generally 2oz), combing through to **ensure even distribution and saturation** to every strand.
3. Process on hair for 5 minutes.
4. Thoroughly rinse, at least 3 minutes, until water runs clear. **Rinse, rinse and rinse some more**, rinsing in sections if needed.
5. Rough blow-dry hair to 95% dry.
6. Flat iron at **450 degrees F** in 2" sections, at least 3 passes per section root to tip, **until fully straightened**. **Hair must achieve 450 degrees F.**

Benefits of Q-Smooth

- Done at the shampoo bowl and finished with a quick flat iron style, no added service time required.
- Results last up to 6 weeks/8 washes.
- Smooths, de-bulks, adds manageability and shine.
- Naturally derived, contains zero formaldehyde.
- No noxious fumes or toxic chemicals.
- No restrictions after service -client can immediately resume a normal, active lifestyle.

This Is The Evolution of Smoothing

Immediately after Q-Smooth application, hair will be straight, soft and incredibly shiny.

After first wash, air-dried styles will be smooth and natural body will begin to return. Curls will be de-bulked and frizz-free. Hair can be easily straightened with a blow-out or use of a flat iron and will remain frizz-free.

Results will slowly diminish with each wash.

Enhance and maintain results with use of Lubricity Labs products.

Q-Smooth can be repeated as often as desired. Results are cumulative.

LUBRICITY LABS™

Application Tips and Troubleshooting for Q-Smooth

- **If hair appears heavy or oily after Q-Smooth service is complete:** Q-Smooth was not fully rinsed out of hair. This texture will disappear after a thorough wash using Lubricity Labs Q-Shampoo.
- **If results do not last after washing:** Either Q-Smooth bottle was not shaken well prior to service application **OR** Q-Smooth was not completely activated during the flat iron step of the application process. Q-Smooth will need to be re-applied, this time ensuring flat iron is set at 450 degrees F, and each section of the hair is straightened with flat iron from root to tip, at least 3 passes or more as needed to achieve completely straight results. **Hair must achieve an internal temperature of 450 degrees F.**
- Always shake Q-Smooth bottle well before each application.
- Always use a professional grade flat iron when activating Q-Smooth.
- Most clients will require application of 2 ounces of Q-Smooth in order to fully coat and saturate every hair strand. Clients with thick, coarse and/or long hair types will require 1-2 additional ounces.
- Only clients whose hair is able to handle 450 degree F flat iron heat should be considered as candidates for Q-Smooth.
- To ensure results are maintained and enhanced, clients should use Lubricity Labs Q-Shampoo, Q-Condition and Q-Restore.
- Q-Smooth has a shelf life of 24 months unopened, 12 months once opened.
