CALIPER SENSITIVITY ADJUSTMENT Sample A

(See Sample A) Hold bow string in one hand and pull release away from you with the other hand when making release sensitivity adjustments. **Never draw bow while setting sensitivity.** To achieve the lightest setting, turn the sensitivity adjustment screw in 1/4 turn increments until it fires prematurely. At this point, back the set screw out 1/16 turn until the release fires prematurely at a pull of around 50 lbs. or greater. Then, back the screw out 1/4 turn (1/2 turn for Assassin Models) and your release will be at its lightest suggested setting. Back the screw out 1/8 turn at a time for a stiffer trigger. Not for use with thinly braided rope loops or rope material under 2mm dia. Call us for quality rope loop made for these release aids!

WARNING:
 ALWAYS INSURE RELEASE IS ADJUSTED TO A SAFE SETTING BEFORE DRAWING BOW!
 NEVER DRAW BOW WITHOUT AN ARROW!
 NEVER POINT YOUR BOW IN AN UNSAFE DIRECTION!
 THINK AND ACT SAFELY!
