SENSITIVITY ADJUSTMENT

(See Sample A) Hold bow string in one hand and pull release away from you with the other hand when making release sensitivity adjustments. **Never draw bow while setting sensitivity.** To achieve the lightest setting, turn the sensitivity adjustment screw in 1/4 turn increments until it fires prematurely. At this point, back the set screw out 1/16 turn until the release fires prematurely at a pull of around 50 lbs. or greater. Then, back the screw out 1/4 turn and your release will be at its lightest suggested setting. Back the screw out 1/8 turn at a time for a stiffer trigger. Use blue Loctite (#242) if screw is adjusted more than once! Not for use with thinly braided rope loops or rope material under 2mm dia. Call us for quality rope loop made for these release aids!
