

# instruction manual

# Introduction -

Dear Real Estate Professional,

Thank you for purchasing enlogik's new product- The Real Estate Sign Light which is a completely autonomous, solar powered led light for the illumination of real estate signs worldwide. A wide beam of soft diffused light is automatically casted on both sides of a sign in order to allow extended hours of marketing and exposure for the property, agent and company brand. As the sun goes down, the integrated photocell triggers the led modules to illuminate. For the next 8 hours, the sign is completely illuminated in a soft discreet light which catches the attention of consumers while respecting the neighbors, community and environment. The unit features a high efficiency solar panel and lithium battery technologies allowing true autonomous functionality with more than 3 days of reserve power. To further clarify, the unit fully charges in 5-6 hours of sunlight and will run for 3 consecutive nights without further sunlight accounting for cloudy or rainy days. In addition, The Real Estate Sign Light was designed as a weather resistant low profile retrofit for the majority of sign posts being manufactured and installed today. From a 1" post, all the way to a heavy duty 3.5" wood, pvc or metal post, the included security screws and adapters will easily secure the "The Real Estate Sign Light" to almost any size post. These specifications far exceed any other solution in the market today and ensure reliable operation for years to come.

be well,

Carlos Prio

## **Whats in the Box -**

- 1- Real Estate Sign Light
- 2- security screws w/ tool
- 1- foam fit kit
- 1- pin tool on key-chain
- 1- instruction manual

## **First things first, please register -**

In order to provide you with excellent customer service please register your Real Estate Sign Light first. Go to the link below and fill out the quick and easy form.

**<https://realestatesignlight.com/tools/product-registration>**

*Your serial number is located on the underside of the unit under the enlogik™ logo.*

## **Second thing, its solar -**

Make sure you install your sign post away from trees or cover of any-kind.

Your Real Estate Sign Light is solar powered and needs a daily dose of direct sunlight. Furthermore, your unit comes partially charged from the factory and needs a complete day of direct sun exposure for a full charge.

## Installation -

1. Remove your Real Estate Sign Light from carton and remove foam & plastic.
2. Locate mounting fit kit and stainless security screws.
3. Determine the fit kit foam configuration and affix to the unit if installing on a post smaller than 3.5".
4. Slide to center of actual sign being illuminated.
5. Align the 2 top screw holes to the center of the post.
6. Pre-drill your holes using a 1/8 drill bit.
7. Install the 2 security screws with the included tool
8. To activate, cover the top of the Real Estate Sign Light with this manual or other solid object as to fully cover the solar panel.
9. Locate pin hole under unit with the sun icon and insert pin tool or a paper clip and depress once to default setting.
10. Settings are as follows- off, low (default), medium or high.
11. The optimum (default) setting is "low" which produces a soft discreet glow over the complete sign up to 30" X 30". This setting provides optimum reserve power and will maintain the unit running for up to 3 days if cloudy or rainy days prevent charging.
12. The clock icon is for the "timer" function. The unit will turn on at dusk and automatically turn off after 4 hours.

## Notes -

1. For the installation of multiple Real Estate Sign Lights we offer the "security bit" which allows you to drive the screws with a drill.
2. For videos go to- <https://realestatesignlight.com/pages/videos>

## Rider Kit -

1. We offer "Rider Kits" that allow you to mount a single rider over the Real Estate Sign Light. However, blocking the solar panel in any way is not recommended so we suggest that you use the same kit to mount 2 riders (one on each side) at the same level as the unit which does not obstruct the solar panel.
2. For an installation guide and videos go to- <https://realestate-signlight.com/pages/videos>
