WAREHOUSE**

## Plastic Post & Chain Options for Crowd Control

Our Medium Duty 2.5' diameter Plastic Stanchions & 2" diameter Chain are designed for light to medium use in an indoor or outdoor application. Our lightweight plastic posts are water, sand, or gravel fillable for added weight to secure the stanchion in place. Use for a wide variety of settings including school zones, parking lots, amusement parks, car shows and festivals. All of our plastic products contain UV inhibitors to maintain the integrity of the product and our colorant is specially formulated to protect against fading with a guarantee no-fade for five years and is made from UV protected, lightweight and strong high-density polyethylene plastic.

### Features

- UV protected plastic for fade resistance, able to be used outdoors
- Available in several colors to match any decor
- A fillable base for added stability by adding water, sand or gravel

The chain links easily connect to the plastic stanchion's hooks on either side or simply run a chain between open handles of items like our safety delinicator posts to create a makeshift barrier!

Plastic Chain Connecting Links and S Hooks are the ideal solution for connecting two chains to make a longer one. Made of lightweight, strong high-density polyethylene, replace broken chain links, connect multiple chains together, attach a chain to a post or stanchion, or hang items like signs.
