

Speaker Wiring for Four Speakers

Parallel

This is the standard wiring for Fender amps with four speakers, ie the Super Reverb, Tweed Bassman, and Blackface Concert. In stock Fender amps, each speaker is 8 ohms. Wired in parallel, you get the correct 2 ohm load for the above stated amps. Most Super Reverb amps from the late 60's on have this speaker wiring. Earlier Fender wiring for four speakers used a "center tab" terminal, but achieved the same 2 ohm load for four 8 ohm speakers.
