

A high quality 4 stage filter cartridge, specifically designed for chlorine, colour, bad taste, and odors PROVIDES 1000 GALLONS of pure water.

This unit houses a custom designed four stage ceramic cartridge which is by far the best on the market.

First a washable sub-micron Porcelain Ceramic pre-filter prevents clogging of the cartridge and thereby extends its effective life. The ceramic pre filter also acts as an automatic shut off valve by slowing water flow to indicate that the ceramic needs cleaning without risking contamination of the cartridge or drinking water.

Free silver ions (Ag+) have a toxic effect on micro-organisms even in relatively low concentrations. They have a highly fungicidal, bactericidal and algacidel effect, therefore removing all harmful bacteria, parasites and viruses including Gardia Lambia Cysts, Cryptosporidium, E Coli, Fecal Coliforms, Hepatitis B and Salmonella.

Stage three removes all heavy metals including lead, mercury, aluminum, iron, copper, zinc, magnesium and silver.

Stage four is a solid carbon block, which is so compressed that it is the equivalent of over 300,000 square yards of filtering media.

- Can go above or [under the counter](#).
- Holds a four stage [washable ceramic](#) filter.
- [Purifies to 0.3 microns](#).
- High capacity cartridge lasts 18 to 24 months.
- Allows the free flow of [calcium and natural minerals](#).
- Full [50 year warranty](#).
