BetaColor Presto Densitometer

The Betacolor PRESTO Densitometer provides all the features found in much more expensive densitometers at the BEST POSSIBLE PRICE.

The BetaColor PRESTO is completely automatic and easy to use and has superior features that include, density, dot gain, gray balance, and color matching.

Using superior LED technology, The BetaColor PRESTO densitometer guides the operator to the perfect job on press.

Use gray balance control or our exclusive Magic Color Match to keep process work and special colors on target.

Features & Functions:

- Automatic Target Identification
- Density, Dot Gain (Two Target Values)
- Gray Balance
- "Magic Color Match" and Gray Balance Control
- Check digital proofs and digital prints, large-format output and labels, offset, flexo, gravure, and screen process easily and accurately.

- 500,000 measurement from 2-AA batteries, never needs to be recharged.
- Two Year All-Inclusive Warranty, Seven Year Warranty on LED Light Source and Filters

Exclusive New Features

- Easy Glide Track
- Target area is always easy to see
- Never touches wet ink
- Large Clear Display (Bold numbers are always easy to read)
- Large flashing color indicators show the measurement channel

The BetaColor PRESTO brings high precision color control within reach of every shop and every operator. The compact new design and unique Glide Track make it easy to get on target for both right- and left-handed operators. The low center of gravity makes it stable on a sloping console and immune to being bumped off a table. It is ergonomically designed for efficient and comfortable use by all operators.

Magic Color Match puts the simplicity and efficiency of gray balance control to work verifying and controlling critical color jobs. Measure a control patch on the OK sheet or proof and lock in all four process color densities with one touch of a button. Measure the patch as the job runs and instantly see any deviation from the target values.

The bold, high-contrast display is easy to see and easy to understand. The high-efficiency electronics provide over 500,000 measurements on a set of AA batteries. This eliminates the need for chargers and cables that can get lost or damaged.

**Please note that the typical North American standard is Status T, Unpolarized.
