

CARGO HAMMOCK

Included Items

- (1) Cargo Hammock
- (2) adjustable elastic retention cords

The Kamchatka Gear Cargo Hammock attaches to the four grab handles along the edge of your vehicle's ceiling and provides a great place to store lightweight items like jackets, pillows, towels, or bedding. Both the top and bottom sides of the Cargo Hammock have adjustable elastic retention cords that help keep your items from shifting around too much.

The top of the Cargo Hammock is the side that you will likely use most often to hold your gear, but the elastic cord on the bottom side is great for holding damp clothes or towels (though items hanging from the bottom will likely impede your vision through your rearview mirror, so it's best not to drive when you have items hanging there). The bottom elastic cord is also great for temporarily holding items like sleeping bag stuff sacks or clothing if you're sleeping inside of your vehicle.

Some Things to Keep in Mind

This product requires four grab handles. Most vehicles have two above the front row of seats and two above the second row of seats. Some vehicles have only three grab handles (most often missing the one above the driver's seat), and this product is not designed for such a vehicle.

The Cargo Hammock is designed to fit most vehicles, but it's impossible for it to perfectly fit every vehicle out there. If it doesn't fit your vehicle, you can return the product and get a full refund.

Depending on where the Cargo Hammock is positioned in your vehicle, the heads of the people sitting in the front or rear seats may rub up against the bottom side of the product.

Do not over-tighten the adjustable corner straps, as this could break or otherwise damage the grab handles.

- ⚠️ **WARNING:** Do not put heavy or hard items in the Cargo Hammock. Don't put anything up there that would hurt you if it flew out and hit you in the head in the event of an accident.
- ⚠️ **WARNING:** Depending on how high the ceiling of your vehicle is and how tall you are, the Cargo Hammock and/or the items in it may partially obstruct your view through the rearview mirror and out the back window of your vehicle.

UNFOLD FOR
INSTALLATION
INFORMATION

Installing the Cargo Hammock

The Cargo Hammock features one attachment strap at each corner. Note that two of the straps along one of the long sides of the Cargo Hammock are longer, and the two straps on the opposite side are shorter. For most people and most vehicles, the shorter straps should be clipped around the rear pair of grab handles, and the longer straps should be clipped around the front pair of grab handles. If you prefer, you may switch it around so that the long straps are clipped around the rear grab handles, and the shorter straps are clipped around the front grab handles. Having the longer straps clipped around the front grab handles helps ensure that the Cargo Hammock doesn't get in the way of the heads of the people in the front seats. See Figure 1.

Figure 1. The upper image shows how most people will want to configure their Cargo Hammock (with the longer straps clipped around the front pair of grab handles). The lower image shows the Cargo Hammock reversed, which is an alternate choice that may or may not work better for you.

The instructions below assume that you are going with the upper configuration shown in Figure 1. If you are going with the lower configuration, replace "longer straps" with "shorter straps" and vice versa (as necessary) in the instructions below.

To install the Cargo Hammock in your vehicle, do the following:

1. Unclip the plastic buckle on each of the four corner attachment straps.
2. Loop each of the two longer straps around the front grab handles and clip each buckle back to its other half. See Figure 2. The slightly lighter side of the Cargo Hammock—the side where you can see the edges folded over—is the top and should be facing the ceiling, and the slightly darker side of the Cargo Hammock is the bottom.
3. Loop the two shorter straps around the rear grab handles and clip each of the two buckles back together with their respective other halves.
4. Tighten or loosen all of the buckles as necessary. Most people will want to tighten (by pulling the free ends) the rear (shorter) attachment straps to be as short and as close to the grab handles as possible. Then the front (longer) straps can be adjusted. (Visit KamchatkaGear.com to view a video of the installation process.) Remember, do not tighten the straps so much that you break your grab handles!
5. Once you have all corners tightened to your satisfaction, fold or roll the excess webbing

Figure 2. A corner attachment strap clipped around one of the interior grab handles. Note that the plastic buckle to the right of the D-ring is facing downward. This is the correct orientation.

Figure 3. The excess webbing on a corner attachment strap looped back onto itself several times and tucked into the elastic retaining loop.

back onto itself and secure it with the elastic retaining loop that is on each corner attachment strap. See Figure 3.

6. Attach one of the elastic retention cords to the bottom of the Cargo Hammock as shown in Figure 4, and then attach the second cord to the top of the Cargo Hammock in the same way. You're all done!

Figure 4. To attach the elastic retention cords, take one of the cords and clip it into two of the corner clips on one side of the bottom of the Cargo Hammock (as shown in the first image above). Twist the cord (as shown in the second image) and clip the resulting loop into the third and fourth corner clips (as shown in the third image above). You can adjust the tension of the cords by pulling the ends through the toggle.
