Step 3 - Locate the proper location for the receptacle box cutout using our cutout template. You can locate the proper location from either the inside or backside of the drawer box, making sure that the arms will not interfere with the slides and that there is enough material surrounding the receptacle box to securely hold it in place.

Step 4 - With a 1/2” drill bit, drill a hole in each corner, being careful not to splinter the wood on the inside of the drawer box. Using one of the 1/2” holes, insert a jigsaw and then make the required cutouts in the drawer box.

Step 5 - Reinstall the drawer box and slide the Style Drawer receptacle box through the cutout. Secure it with the 4 wood screws provided.

Note for Blade outlets: Attach the mounting flange before securing the receptacle box.
**The Style Drawer Series outlets** include a 100˚-120˚F resettable thermostat to protect against overheating inside the drawer. To reset, correct the source of over temperature and push the button in the center of the vents of the cover plate. Note: You may need to wait a few minutes for the unit to cool before the thermostat can be reset.

The GFCI outlet has a green LED which will light if there is power to the outlet. If the LED is not lit, check the GFCI reset button, the thermostat, and that the line, neutral, and ground wires are connected properly.

For a successful Style Drawer Series installation, it is **NOT** necessary to touch anything inside the receptacle box. However, if the outlet needs to be removed, reference the above diagram.
