

INFORMATIONAL GLYPHOSATE TEST

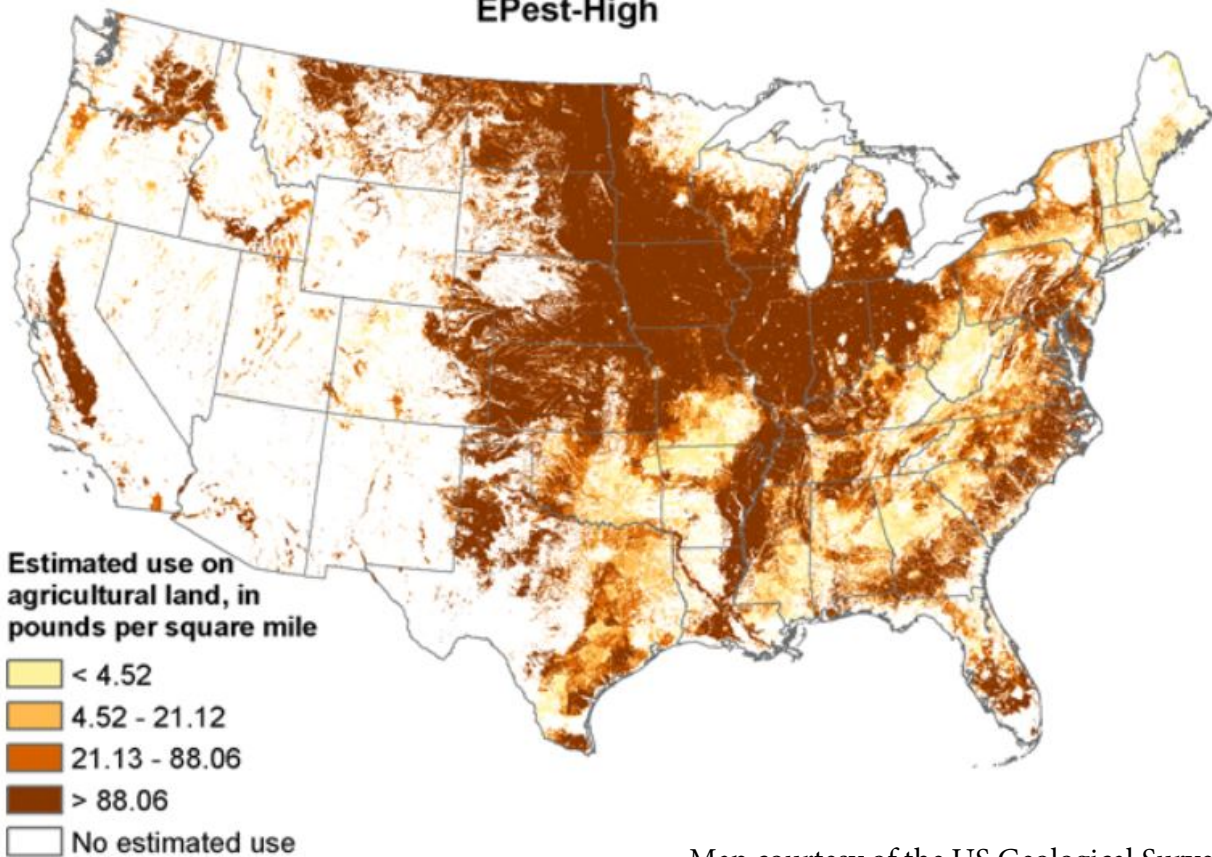

New Herbicide Test for Glyphosate

For those who may not recognize the chemical name Glyphosate, it is the most widely used herbicide on the market today, known as Roundup™. I'm sure many of us have a bottle of this on hand to deal with those pesky weeds in our landscaping. Testing for this compound is done using highly sophisticated equipment, which utilized High Performance Liquid Chromatography, so it can be a costly test to run. NTL is pleased to offer an informational test for glyphosate in drinking water at a reduced price. This test would solely look for glyphosate with a detection level of 0.1 mg/L or parts per million. Please call us at 1-800-458-3330 if you have any additional questions.

Estimated Agricultural Use for Glyphosate, 2012

EPest-High
