

## Shed Comb Instructions for The Saffron Pocket Loom

First, insert the shed comb between the warp threads and the threaded rod with the comb flat and the top of the comb facing towards the top of the loom.

Next, turn the shed comb so that the tines are lifting up every other warp thread. There is a groove in each tine to hold the warp threads on the tines.

To engage the alternate shed, flatten the shed comb and move it over one warp thread. Turn the shed comb once again so that the tines are lifting up the opposite warp threads as they were before.

*Note: We recommend that you use a tapestry needle when using this shed comb.*
