

Conley's Free Air Series 4000 – Harnessing “**natural ventilation**” to its **maximum** potential.

Suited for a variety of growing applications in need of natural ventilation, the progressive design abilities of the Free Air Series 4000 make a great solution for Acclimation houses that demand sensitive growing conditions.

Optional roll-up walls and retractable overhead shade systems help to create the superb efficiencies achieved.

Anti-Condensate Control

ROLL-FORM

Customization

Main Features

- Superior ROLL-FORM trusses, purlins and gutters ensure unmatched structural integrity
- Unique gutter design that allows for optional column extensions for overhead shade systems
- Roll-up vents provide maximum vent opening
- Aluminum end wall combination creates a flashing for end wall and roof coverings
- Arch and purlin design offers “I” beam technology for superior strength
- Components are shipped pre-punched and cut to length; simplifying the installation
- ROLL-FORM components nest one into the other during shipment, substantially reducing freight costs

Sizing

Widths: 24' and 30'

Under Gutter Heights: 8', 10', 12', 14'

Loading

This structure is engineered to meet a standard 12 LB live load 85 mph or 110 mph wind per the International Building Code (IBC).
