PORTABLE BULK TRANSLOAD & DELIVERY SKIDS

Item code: DEF-PUMPSKIDS

We can custom design a skid to your needs, from a mechanical to a fully electronic system that includes the Weights & Measures approved TCS-682 piston or 700 rotary meter.

To assist in the distribution of DEF (Diesel Exhaust Fluid) in your marketplace, PETRO has developed a range of portable DEF bulk delivery skid systems.

These systems can replace or delay the need for an expensive dedicated DEF tank truck. Using an existing box truck or trailer that already makes deliveries of products such as lubricants and other bulk products, this equipment skid coupled with a separate polyethylene tank or totes can make bulk deliveries of DEF efficient and economical for any distribution company.
