

## Tank Fluid Monitoring

# MODIFIED WATER FINDING PASTE

Item code: MODIFIEDWATER-FINDPASTE-CATA

Suitable only for use with Reformulated and Oxygenated Fuels, such as Ethanol, MTBE, Ether, Etc. For testing for the presence of water at the bottom of fuel storage tanks.

### FEATURES:

- No expiry date.
- Will keep best when stored between 31F to 115F.
- Tube contents 2.5oz.
- 12 tubes per full box.

### INSTRUCTIONS:

- Applied to a rod / length of string with bottom weight, the brown paste changes colour to brilliant red where it comes into contact with water, giving you a visual indication as to the depth of the water present.
- The water can then be pumped out, and the test repeated until there is insufficient water to pump, at which point one of our Water-Soakers can be used to absorb the last of it.
- To remove the bulk of the water we would first recommend pumping the water out with a simple self-priming waste oil/water pump, such as our Drill Powered, Flexible Impellor Pump, and a length of 1/2" Hose (Same size as Garden Hose) before using the absorption media as described above.

### ALSO AVAILABLE:

**Hydrocarbon Finding Paste**  
Code: Hydrocarbonfindingpaste

**Water Finding Paste**  
Code: Waterfinding-paste
