PIUSI

Integrated Dispenser and Electronic Fluids Management System

SELF SERVICE MC

Item code: F0074101C-CATA

The Piusi Self Service MC Fuel Management System is an innovative diesel dispenser, that offers authorised users fast and precise dispensing and fuel monitoring features. The Piusi pump and monitoring unit is capable of recording the date, time and amount of fuel dispensed for the last 255 transactions.

This fleet fuel management system has the capability of controlling up to 80 users as standard. It also only allows these users to have access to the pump, providing the tank owner with fuel security.

It can be controlled and setup at the unit only, by means of pin code or magnetic data key. Whereas these stand alone fuel management systems show transaction data on the unit's screen; there is an optional Self Service Desk software package that permits the exporting of data to a PC for analysis.

The Self Service MC Fuel Management Systems come either as floor mounted versions or Mini versions, which can be wall or tank mounted.

FEATURES:

• Panther E120 diesel transfer pump.
• K600 Flow Meter.
• Automatic nozzle and nozzle holster.
• 4m x 25mm ID Delivery Hose.
• Available in 110V or 230v.
• 1 1/2" BSP Inlet.
• Integrated water removal filter assembly.

PERFORMANCE:

• Flow rate up to 100Lpm.
• Accuracy: +/- 0.5 %.
• Continuous AC operation.
• Noise level below 75 dB.
• IP55 protection.

FEATURE SUMMARY:

Code	Description	Voltage AC V./HZ	Watt	Amp	Flow Rate	Meter	H$_2$O Filter	Nozzle Type	Pump	Inlet BSP	PC Connect
