Vendor Management Inventory

VENDOR MANAGEMENT INVENTORY

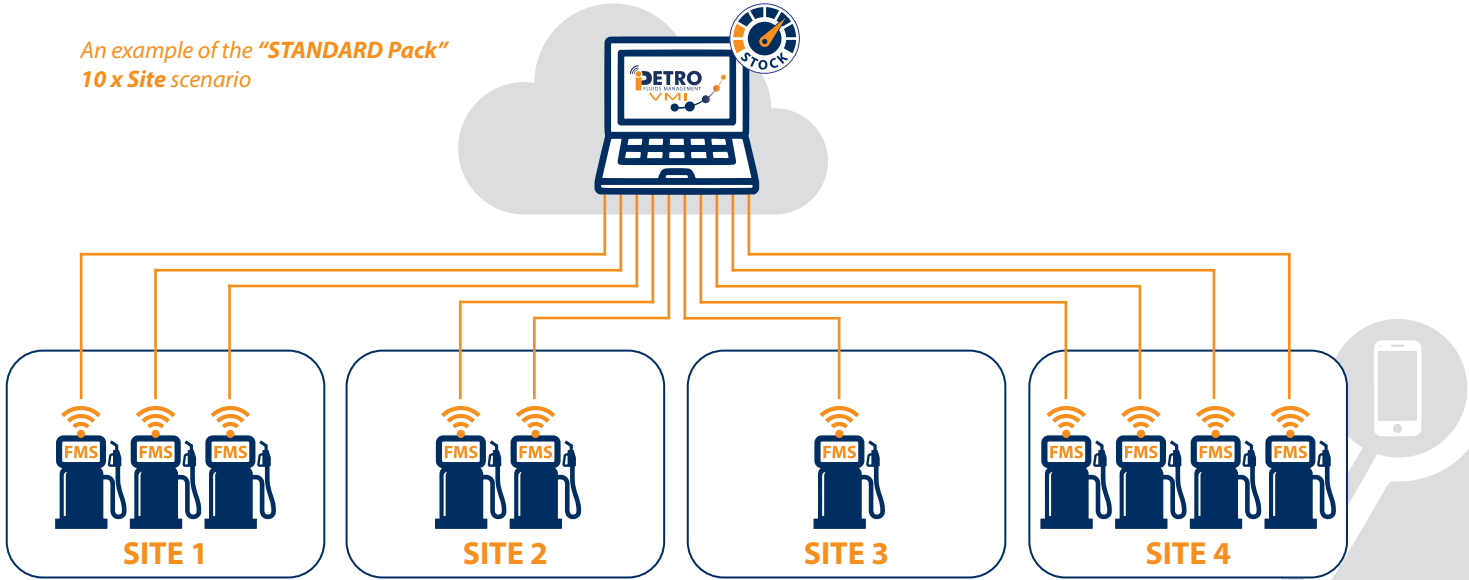

Vendor Management Inventory for fuel would involve the fuel supplier taking responsibility for managing and maintaining the inventory levels of fuel at the customer's site.

The fuel supplier would monitor the fuel consumption patterns and inventory levels at the customer's location and proactively replenish the fuel as needed to ensure that the customer never runs out.

By implementing VMI for fuel, the customer can offload the burden of inventory management to the fuel supplier, allowing them to focus on their core business activities.

Vendor Management Inventory for fuel is a collaborative approach between the fuel supplier and the customer, where the supplier takes an active role in managing the fuel inventory to ensure efficient and uninterrupted supply.

An example of the "STANDARD Pack"
10 x Site scenario

This infographic demonstrates the integration process of multiple management systems across various sites into the **iPETRO VMI Data Management Software**.

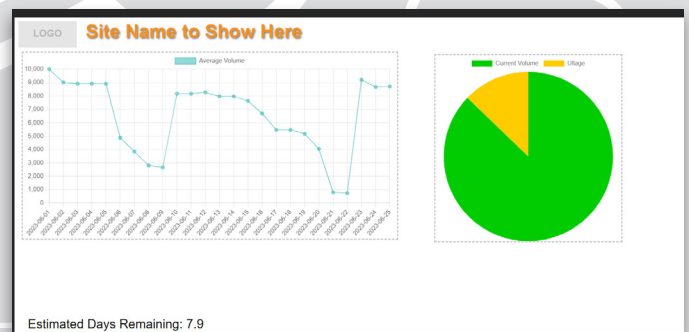

You now have the convenience of accessing and **receiving reports** from multiple sites with different management systems through a single login portal.

The iPETRO VMI Software **seamlessly integrates** with your current management system, regardless of the brand. This integration allows you to have **complete control** over all your sites or depots, regardless of your location.

Additionally, **automated email alerts** will notify you of low levels in any of the tanks, and even your fuel suppliers can be automatically informed about fuel shortages.

Please consult your iPETRO sales representative to ensure that the appropriate specifications aligns with your specific requirements.
