ULTIMATE® DUAL SHOWER FILTER REFILL INSTALLATION INSTRUCTIONS

Tools are not needed to remove or install the shower filter or the refills

Filter Replacement:

There are two ways in which you can change the filters.

1) Unscrew the left and right side of the filter housing covers while leaving the shower filter attached to the wall pipe

OR

2) You can remove the shower head and shower filter from the wall pipe and then remove the filter housing covers.

When you make a filter change and install the new filters, please note that each filter has 3 lines across. The long centerline matches to a raised piece on the male end that has the small "O" ring on it. This raised piece fits into the small groove on the centerpiece. Use silicon Lubricant or if not available use Vaseline on the "O" rings. Silicon lube comes in a tube and is available at most swimming pool parts stores or you can order it from us.

Your Sante Ultimate Shower Filter refills need to be changed at least every 12 months. We will send a reminder post card. Not changing as prescribed will void the shower filter warranty.
