Installation Examples

- Removes iron-oxide, magnetite, sludge, and other particles from hydronic systems
- Unique design captures non-metallic objects at the bottom of the filter
- Shutoff valves isolate the filter and allows you to remove the cap and wash off the magnet
- No replacement cartridges - simply clean the magnet and return it back into the canister
- Design allows for full flow at all times meaning no loss of pressure
- Extends system life and protects circulators from seizing
