

WATER TEST KIT

- Rapid on-site analysis of central heating system water
- Simple colour charts for measuring concentrations
- Tests for major parameters affecting water quality

Fernox Water Test Kit

The Fernox Water Test Kit is designed to give rapid on-site analysis of the major water parameters that can affect the life span of a central heating system.

This test kit is supplied with all equipment and reagents required to determine chloride, copper, iron, hardness, pH and Fernox Protector levels. All tests are suitable for use with water containing Fernox corrosion Protectors.

Easy to use colour charts are provided for the iron, copper, pH and hardness tests. Simple drop tests are used for measuring the levels of inhibitor and chloride.

Replacement Parts

Replacement reagents for this test kit are available from our sales office on **0330 100 7750**.

Detailed Description

The Fernox Water Test Kit is supplied with all the equipment and reagents required for 50 determinations of chloride, copper, iron, hardness, pH and Fernox Protector levels in central heating systems. The test methods are very simple to use and do not require any formal training. An interpretation of water analysis is also supplied with the test kit instructions to help you determine the necessary remedial action.

A comprehensive range of postal laboratory testing services are available to compliment the Water Test Kit. For further details please call Fernox Technical Services on 0330 100 7750.

Packaging, Handling and Storage

The Fernox Water Test Kit is supplied as a complete test kit in an outer plastic carrying case, with full instructions.

The Fernox Water Test Kit contains hazardous reagents. Please refer to the Material Safety Data Sheet or risk and safety phrases quoted on the reagent containers. Keep out of reach of children.
