

# Instructions for assembling the Doll House

## CONTENTS

Your doll house includes 6 cardboard pieces;

- 1x main body
- 1x floor
- 1x center support
- 2x shelves
- 1x roof

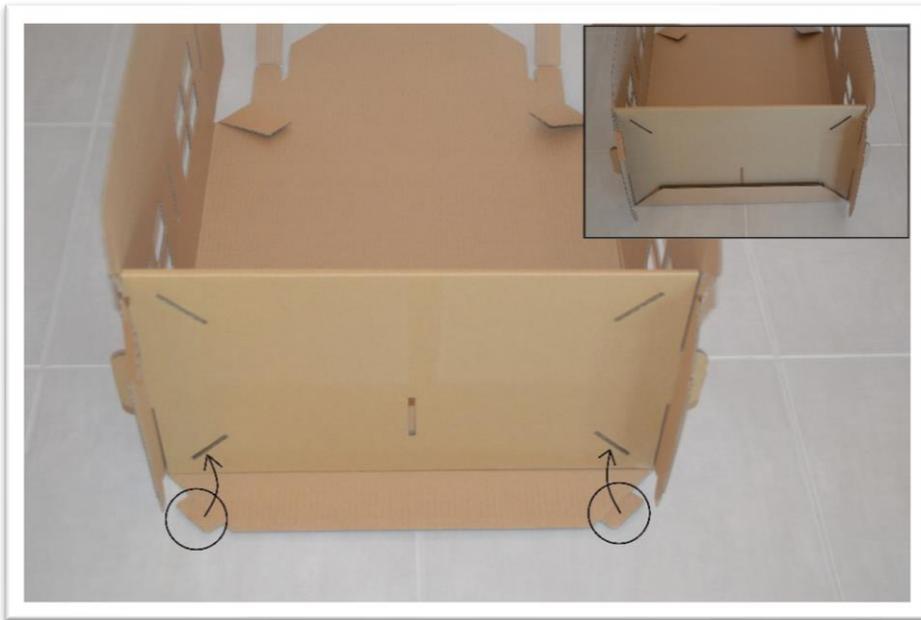

## MAIN BODY & FLOOR

Begin by folding the floor in half, ensuring that the 5 slots match evenly.

NOTE: Always fold the pieces so that the side with the faint lines is on the inside.

Once folded, insert the floor into the main body at its base as shown.

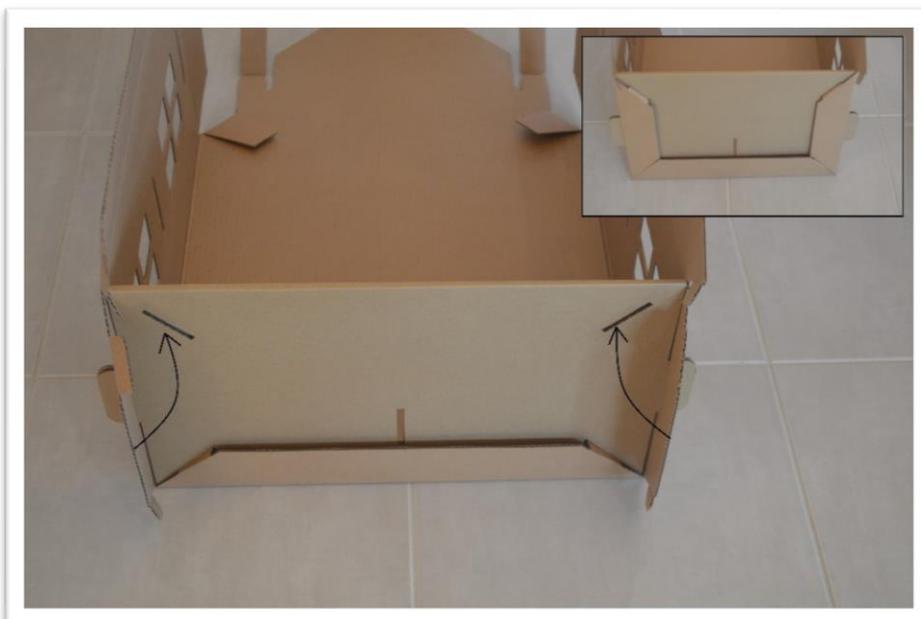

NOTE: Ensure that the floors center slot is closer to the back wall, and the folded edge of the floor is facing out.

Bring the bottom flap of the main body up and insert into the base of the floor.

NOTE: The flaps will protrude into the floors base, and are not designed to be folded over flat, as they are for the houses stability.

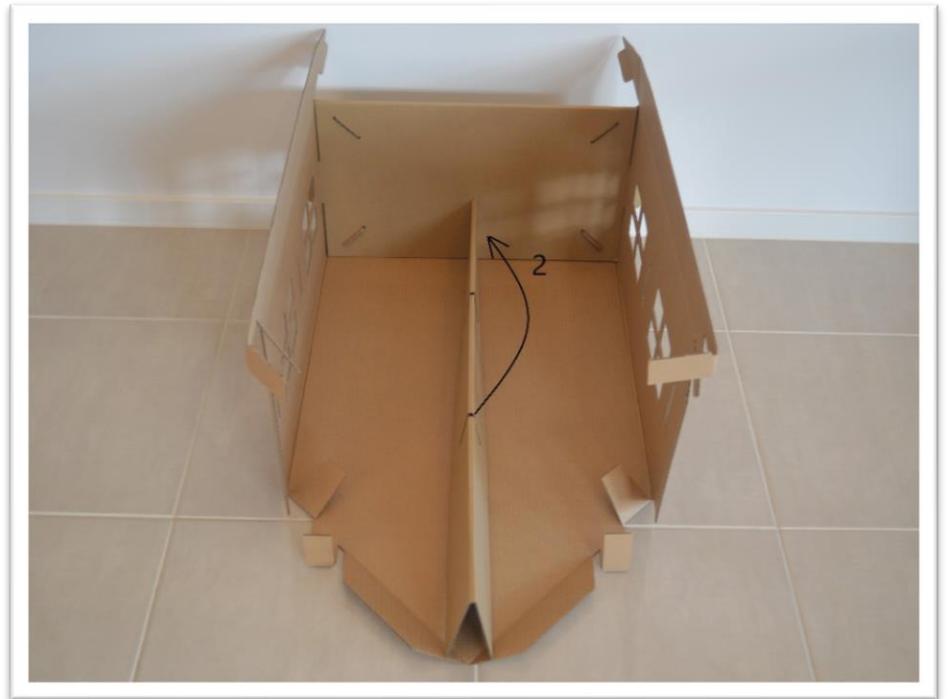

Now bring both side flaps of the main body over and insert into the base of the floor.

## CENTER SUPPORT

1. Now take the centre support and fold it in half, remembering to keep the side with the faint lines on the inside.
2. Insert the support into the base. (The tip of the support will appear to open, but this will resolve when further pieces are added.)

NOTE: This picture has been taken from the top of the house looking inside towards the floor. This gave us the best view of the centre support.

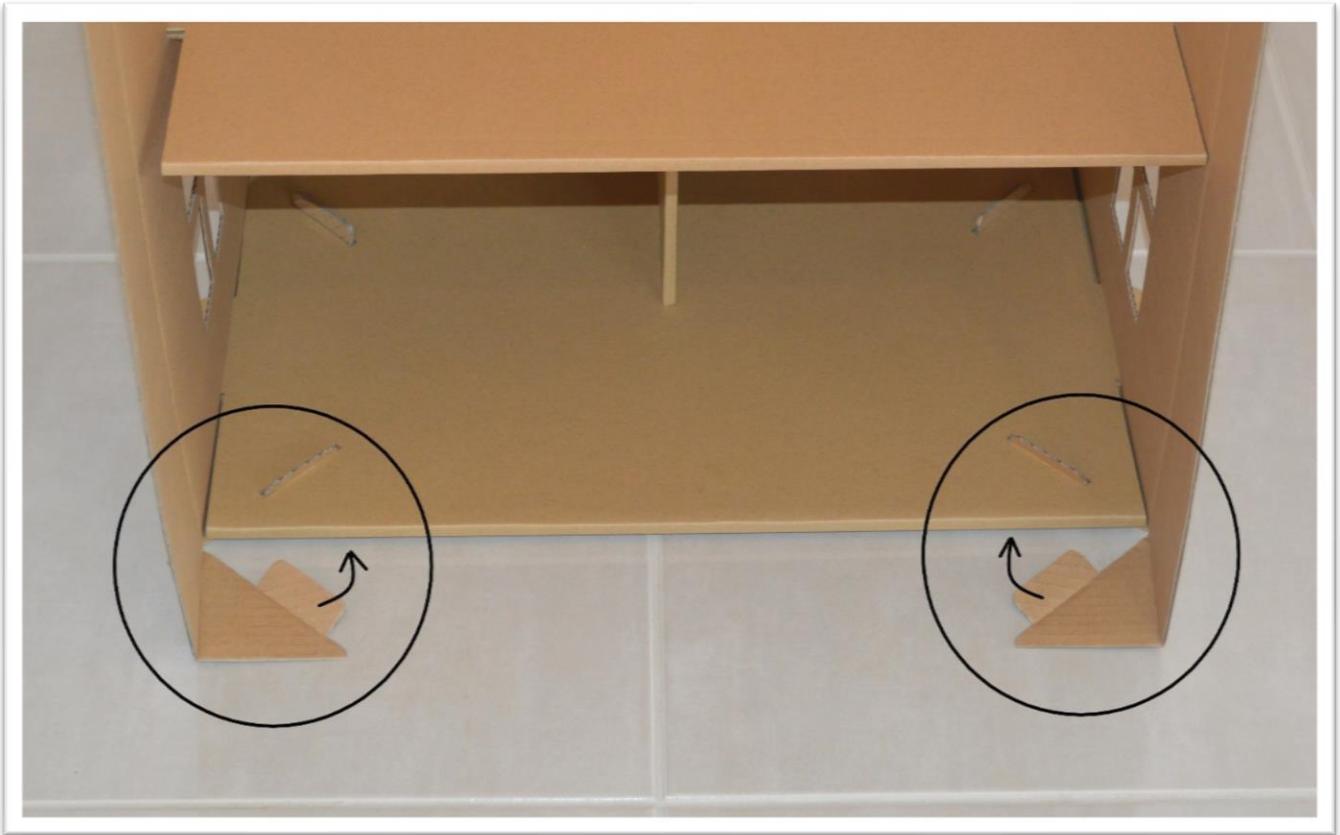

## SHELVES

Shelf 1 - fold shelf in half ensuring an even fold and that the faint lines are on the inside. Then proceed to insert the two side tabs in the walls of the main body, and the slot slips into the main support.

Do the same for Shelf 2....

NOTE: The house is now sitting on its base and we are looking into the house from the front.

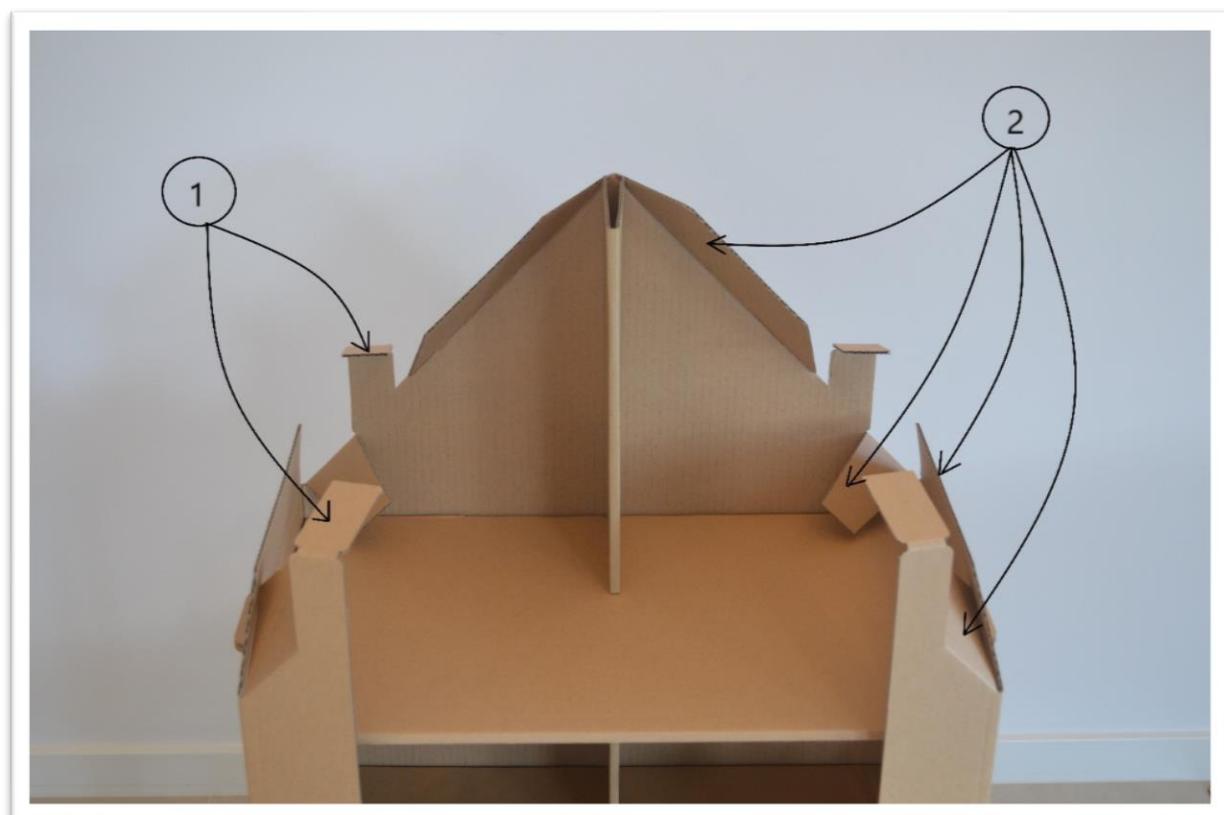

**MAIN BODY & FLOOR**  
**Continued...**

The front now needs to be brought over, and the flaps at the base need to be inserted into the slots on the floor. (Use the same slots as the side flaps)

## SECURING THE ROOF TO THE MAIN BODY

The roof piece will need to be folded carefully in half and ready to place on the top of the main body. See image 2 for further instructions prior to placing on the roof.

### As you are about to place the roof on...

1. Fold the loose flaps on each chimney piece down, so it doubles the strength to the chimney's when the roof is being pushed down.
2. Ensure all these flaps on both the left and right side of the house, are folded inside the house when the roof is being placed.

Work carefully to place the roof onto the body.

CONGRATULATIONS YOU HAVE NOW COMPLETED BUILDING YOUR  
MODNPOD DOLL HOUSE...  
NOW THE DECORATING STARTS. HAVE FUN AND DON'T FORGET TO  
SEND US SOME PHOTO'S. 📷
