## IMPORTANT INFORMATION

In order to run Moggy's Product Review Generator software, your Shopify store will need to have the Shopify Reviews App Installed. We strongly recommend that you use private proxies with our software, especially if posting many product reviews. If you do not wish to use proxies, please ensure to set a generous delay between each product review submission. Please use this software responsibly.

## INSTALLING SHOPIFY PRODUCT REVIEWS APP

Before using Moggy's Product Review Generator, make sure to install the Product Reviews app by Shopify. You can get it for free by going to <https://apps.shopify.com/product-reviews>

The Product Reviews app will appear under each product and will look like this.

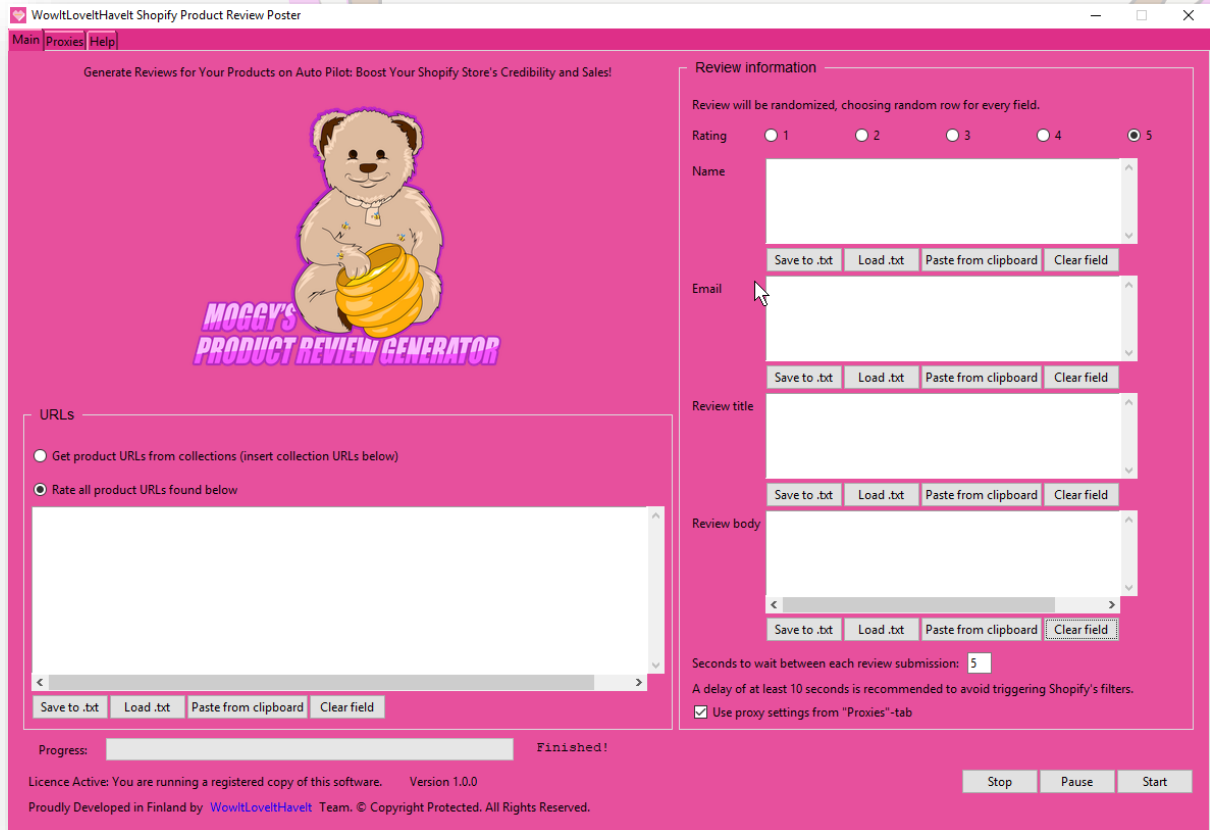

## INSTALLATION

Name	Date modified	Type	Size
data	06/03/2018 16:55	File folder	
img	06/03/2018 16:55	File folder	
chromedriver	27/01/2018 13:30	Application	6,254 KB
proxy_auth_plugin	05/03/2018 21:57	WinRAR ZIP archive	2 KB
reviewer	05/03/2018 18:37	Application	9,940 KB

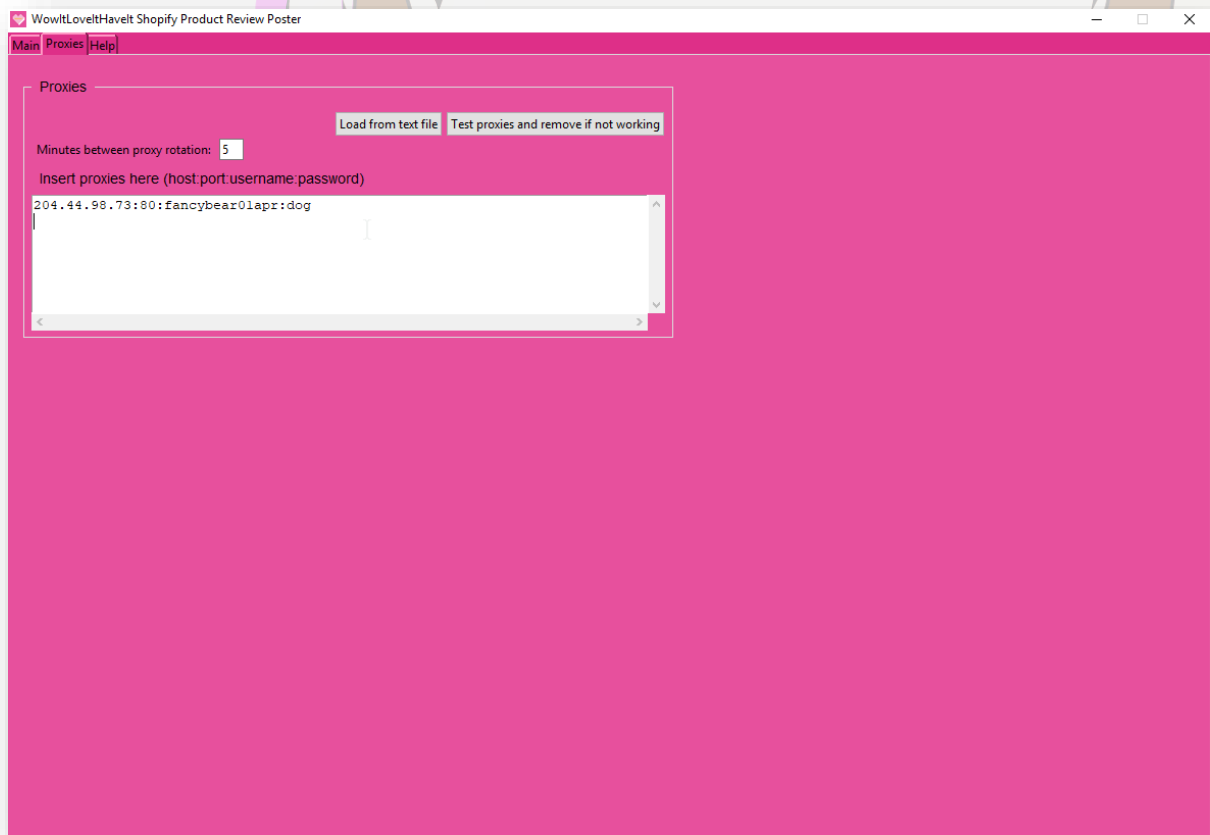

Extract the files from the zip file, save them to your folder and double click on the “reviewer” Application file to run the software. You can pin the software to your menu for quick access. After running the software for the first time, you will be prompted to enter your licence key. Your licence key will be supplied to you via email within 24 hours after your purchase. You can only use your licence key once and it will be tied to your machine.

## REVIEW GENERATOR SETTINGS

You have two options: you can either post Shopify product reviews to your list of urls or alternatively, you can extract product page urls from a collection. Go to any given collection on your Shopify store, copy it and paste it into the input box by pressing the "paste from clipboard" button. Now click on "start" button at the bottom right hand. The software will extract all product urls from your collection and populate the url box. Now shift your focus to the right hand side of the screen and complete the review data fields. Select the "rating" or the number of stars you would like to give for each product review. Then enter a collection of random emails in the "email" field (these will not be displayed on the actual reviews but using different fictitious emails helps to avoid Shopify filters). As follows, enter the "review title" which is the title of the review. Lastly, enter the "review body" where you talk about the product or user experience in more detail. Remember, one new line represents a new review. Ensure that you enter enough data (on a separate line) as you do not want to be posting the same review to all your products. We strongly advise you to set at least a 5-10 second delay between each review submission to avoid Shopify filters that can prevent you from posting reviews.

## ADDING AND CONFIGURING PRIVATE PROXIES

We strongly recommend that you use private proxies with Moggy's Product Review Generator. A proxy is a way of directing activity from another IP address. Proxies are not crucial but they do help in avoiding Shopify's filters that could prevent you from posting too many reviews from the same IP address. We recommend that you rotate your proxies every 5 minutes to keep in the clear. You can either load your private proxies from a .txt notepad file or copy and paste them into the proxies input field. You can then test your proxies and automatically remove non-working ones. The software will open and close the Chrome browser window multiple times as it tried to establish an internet connection through each proxy. Do not close the browser windows, they will close automatically.
