

## RefectoCil Lash Styling Treatment Procedure

- Cleanse the eye area with **RefectoCil Micellar Eye Make-up Remover** and then once more with Saline solution.
- Ask your client to look up and use the **RefectoCil Eye Care Pads** or **Silicon Pads** to hold down the bottom lashes. Once they are secure your client can then close his/her eyes.
- Select the ideal **Lash Lift Pad** size depending on length of the clients lashes and desired lift effect.
- Apply **RefectoCil Lash Lift Glue** to the back of the lifting pads – wait approximately 5 seconds to allow glue to become 'tacky' then adhere the pad to the eyelid, as close to the lash line as possible without going over the roots of the eyelashes.
- Working 3-4 small sections, apply Lash Lift Glue to the lifting pads, waiting 5 seconds then using either the **Rose Wood Stick** or the **Lash Lifting Tool**, gently adhere lashes to the lifting pads. Separate and isolate lashes as neat and as straight as possible.
- Once all lashes are adhered to the lifting pads, 'lock in' the tips of the lashes using extra lash lift glue. This will ensure lashes stay secure during the processing time.
- Dispense a pea sized amount of **Lash Perm Solution** into the **Mini Application Dish** provided. Using the **Soft Application Brush** apply Lash Perm Solution from the base of the lashes and  $\frac{3}{4}$  of the way up. Do not apply solution to the tips of the lashes.
- Set a timer for **6 minutes**. Once the minutes have passed, use a dry cotton tip to gently remove the Lash Perm Solution. Be careful not to drag the solution past the tips of the lashes.
- Dispense a pea sized amount of **Neutraliser** into the second Mini Application Dish and use the second Soft Application Brush to apply Neutraliser to the same area that the Lash Perm Solution was applied.
- Set a timer for **5 minutes**. Once the 5 minute processing time has passed. Use a cotton tip to remove Neutraliser.
- If tinting the lashes, you can tint directly onto the lifting pads once the Neutraliser has been removed from the lashes. The processing time for a lash tint after a lift is **2 minutes** as the cuticle of the lashes are open.
- Using a kidney dish with luke warm water, ask your client to tilt her head towards the dish and gently flush eye area. The lashes will become unstuck from the lifting pads and the lifting pads will gently come away from the eyelid.
- Use RefectoCil Saline Solution to ensure all residues are removed from the lashes. Saline will also balance the PH of the eyes.
- Apply **RefectoCil Styling Gel** to finish the treatment and recommend your client use the **RefectoCil Care Balm\*** 2-3 times a week at home to ensure optimum lash health.

\*RefectoCil **Care Balm** must only be applied 48 hours after a lash tint or lash tint.

# RefectoCil Brow Lamination Treatment Procedure

- Conduct client consultation and check for contraindications.
- Using a cotton pad, cleanse brow area with RefectoCil Micellar Eye Make Up Remover. Using the RefectoCil Browista Brush or spoolie, comb brow hairs into place.
- Dispense a pea-sized amount of Step 1 Power Perm into RefectoCil Dish. Using RefectoCil Application Brush, evenly apply Power Perm to the brow hairs (avoiding any skin around the eyebrows). Using the spoolie/browista brush, comb brows into desired shape.
- Allow Step 1 Power Perm to process for 6 minutes then remove Power Perm using a dry cotton tip.
- Dispense a pea-sized amount of Step 2 Neutraliser into RefectoCil Dish. Evenly apply Neutraliser and comb brows into desired shape.
- Allow Step 2 Neutraliser to process for 5 minutes then remove with a damp cotton pad.

**Trainer Tip:** Tint brows with RefectoCil Tint and Oxidant and style with RefectoCil Styling Gel. Use RefectoCil Care Balm to condition lashes in-between salon appointments.
