

HOW TO USE:

5. Press the Start button. The Lie Detector is now in stand by mode and will boot up.
6. Once all five lie level lights are lit and you and your subject are ready, press the Start button again. If the sensors do not detect your subject's hand, an alarm will sound.
7. After pressing the start button, you will have 12 seconds to ask and receive an answer. Ask only questions that require a 'yes' or 'no' response. You must press the 'Start' button before each question and answer.
8. There are 5 lie levels. The more LEDs that light up, the further away from the truth. When the subject tells a direct lie or has provided an unacceptable amount of half-truths, they will receive a shock or a buzz!

**WARNINGS:**

- This product is designed to surprise. In shock mode, it emits an electric shock and may interfere other electrical devices such as pacemakers. Do not use if you have any medical conditions that could be aggravated by an electric shock.

Instruction Manual

**DIGITAL LIE DETECTOR WITH
ELECTRIC SHOCK & VIBRATION**

LIAR, LIAR™

Read through this entire instruction manual BEFORE using the **Liar, Liar**. We're dedicated to bringing you well-designed products that make living fun and easy. We stand behind all our products and warrant this to be free from defects in workmanship and materials.
