

Instruction Manual for Hatch Me If You Can! Dragon Egg

Read through this entire instruction manual BEFORE using **Hatch Me If You Can!** We're dedicated to bringing you well-designed products that make living fun and easy. We stand behind all our products and warrant this to be free from defects in workmanship and materials.

For service claims or questions please consult our website ProtocolNY.com.

Submerging the Egg

Use a large jar or pitcher of water that is big enough to hold the entire egg with room to spare, approximately $\frac{1}{2}$ gallon. Keep in mind the dragon will expand and need more space as it hatches and grows.

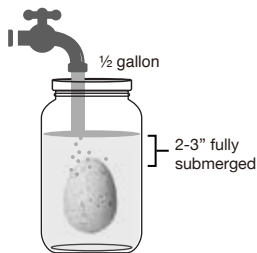

Fig. 1

Fig. 2

Fill the container with water, completely submerging the egg by 2-3 inches of water. Air bubbles may float out of holes in the egg as it sinks.

Caution: Do NOT change the water or remove the egg before 1 week has passed. The egg shell is lined with powder sachets which dissolve in water to create a growing solution. Replacing the water will dilute the growing solution. Do not eat the egg or drink the water.

Hatching the Egg

Wait 3-4 days, until cracks appear on the surface of the egg (Fig. 1). The egg is "hatching". Pieces of the shell will break apart (Fig.2) and the egg should fully hatch after 1 week, with a fully grown dragon on the inside.

Dragon grows to approximately 7"L.
