

Brain Vortex Instructions:

1. 1st player places peg in the START slot.
2. To move to the #1 slot, you must roll a number 5 either on one dice or with both dice equaling 5.
3. If you do not achieve a 5 on the first roll, the 2nd player then places their peg in the START slot and tries to roll a 5.
4. Taking turns, once you have made it to the #1 slot, you then must roll the number corresponding to the next peg.
5. For example, to move to #2 you must either roll a 2 on at least 1 dice or a combined 2 from both.
6. If you roll into a slot that is already occupied, you then bump that player back to the START position.
7. For example, player two rolls a 3 and peg #3 is occupied by player one. Player one must then go back to START.
8. Continue to work your way around the board.
9. The player that makes it back to START (by rolling a 12) wins the game.
