

REPELS NUISANCE BIRDS SIMPLY, SAFELY, AND EFFECTIVELY.

**Larry the Seagull doesn't want you to buy our product because
*IT WORKS!***

How does it work?

Shaped like a peregrine falcon, the WhirlyBird spins, clacks and wobbles in the wind and reflects light in a constantly changing pattern that scares birds and prevents them from becoming acclimated to its scary effects.

The WB works best in repelling nuisance birds when used in areas with a prevailing breeze and when mounted high above the areas where the birds are perching.

What product do I need? PRO or BREEZE?

The **PRO** is designed for open areas that experience high winds, such as communication towers. The **BREEZE** is designed for areas that experience lighter winds, such as farms and outdoor dining areas.
