

Confirmation lifetime of Amex-10 Seals

We hereby confirm that the proper installed Amex-10 Seal is leak proofed for 50 years in accordance with the RAPRA lifetime test report (Project no: H0091 and no: C1936). Furthermore, the IRO high-pressure-flushing test certified the product for all parts of a pipe cleaning process including camera inspection etc.

Please respect the information below to the lifetime of the Amex-10 Seals:

Basically, after a proper installation of the Amex-10 Seals from an Amex-technician or a trained, licensed person from an Amex-technician in accordance with the Amex-10 manual there is nothing to consider.

Please avoid using fire or high temperature [more than 130°] near the EPDM rubber seal. Also please note that the EPDM rubber will lose its quality if sunlight will meet it. Furthermore, hard blows with pointed and/or sharp objects onto the rubber could damage the surface.

If there are serious differences of pipe conditions [e.g. high pressure change, pipe loses its shape, extreme movement etc.] the Amex-10 Seal could also lose its functionality.

Nöbdenitz, 18th August 17
