

The CAMDO SHOOT X camera is a purpose built timelapse camera providing high quality 2.6K images and associated time lapse videos. This is significantly better than 1080 High Definition resolution and more than four times the resolution of a Brinno camera.

The camera currently takes JPEG images and can be programmed to shoot a single interval periods that repeats continuously.

An **optional** CLOUDX service provides an online statusing and upload platform for the camera. Contact SeeSense for details.

SeeSense are able to provide full technical assistance and back up for this camera. Please contact SeeSense for further details and for accessory options

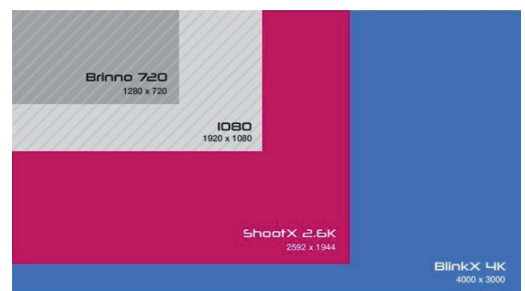

Specifications:

- 2.6K resolution (**More than 4x Brinno camera**)
