

# Classic Series

Proudly made in Britain, the Classic Series is Ashdown Engineering's new flagship bass amp range. Comprising of 500 and 1000-Watt Klystron heads, a selection of cabinets and a range of 500-Watt combos, the Classic Series is about doing everything better – more volume, greater dynamics and an extended frequency range.

Features including variable tube grind, a dual-band compressor, a sub-harmonic generator and 7-band EQ

combine with stunning new lightweight Neodymium loudspeaker drivers to make the new Ashdown Classics powerhouses of tone.

And a 4-way footswitch (included) delivers unrivalled performance versatility. Find out more at:
