

Classic Series

Forged from experience, vision and cutting edge technology, the new Ashdown Classic Series raises the bar in bass amplification. Our flagship line offers two

Klystron heads (800 & 1000 Watt), expertly-tuned cabs and combos – all designed to deliver enhanced frequency response, incredible dynamic range and pure musicality. This is about doing it better. Proudly built in the UK, the Classic Series amplifiers not only exhibit the style you've come to expect from Ashdown, they also rock harder and louder than anything we've done before.

The new Klystron heads and combos feature a variable tube grind for warmth, a sub-harmonic generator for depth,

a dual-band compressor for accurate control, a 7-band EQ for endless tone shaping and a 4-way footswitch for performance versatility. Cabs and combos are precision tuned and feature lightweight, state of the art Neodymium drivers for unmatched presence and frequency response. Together they redefine the sound of 'Classic' bass.
