RAKE

LOB / SAND / GAP

Get unparalleled performance from bunkers, thick or wet rough, tight lies and hardpan – *these innovative RAKE wedges are game changers!*

PnP Golf's patented 'Dual Bounce Rail' design and advanced 'On-set Leading Edge' glides through sand and combs through rough like no other wedge – with *more excelleration* and *less effort*.

What is the difference between PnP Rake wedges and other lob, sand or gap wedges?

The main difference: We have broken-up the one (1) large, blunt bounce, found on other wedges, into two (2) bounces; ie. a rail bounce and a secondary 'between rail' sole bounce.

Why does it work so well?

Sand and rough: The gap formed between the rail bounce and the lower sole bounce provides an avenue for the underlying sand and turf to pass through – thus more acceleration with less effort.

You will also have more control, as the rails assist to stabilise the club-head's intended direction through the sand and rough.

Tight lie and hardpan: The rail design breaks through the surface tension of the underlying surface, in effect lowering the club's leading edge at impact to deliver better contact and flight.

The 'Dual Bounce Rail' design is exclusive to PnP RAKE wedges.

Skilled manufacturing goes into USGA and R&A conforming, precision face milling and groove cutting for maximum spin.

All PnP Golf clubs conform to USGA and R&A regulations

Kathy G-Jensen
2014 USA PGA Teacher of the Year

"I am so amazed at how easy it is to execute what normally would be a difficult shot out of the rough, and how effortlessly I can get the ball out of a bunker.

The GAP Wedge is a significant addition to improving your game!"

DUAL BOUNCE ADVANTAGE

RAKE

LOB / SAND / GAP
WEDGE SERIES

LOB WEDGE

- 15° rail entry bounce combined with 7° of sole bounce
- 7.5° offset rail design promotes an open club face

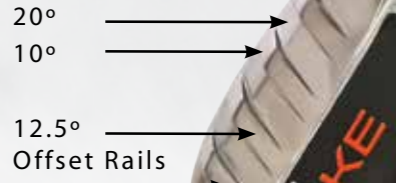

LOB WEDGE

WEIGHT: 310G
LOFT: 60°
LIE: 63°
BOUNCE: 15°/7°
CLUB LENGTH: 35"
RAIL ANGLE: 7.5° OFFSET

SAND WEDGE

- 20° rail entry bounce combined with 10° of sole bounce
- 12.5° of offset rails support an open face from the bunker

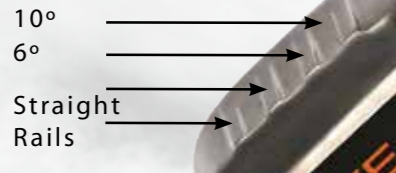

SAND WEDGE

WEIGHT: 310G
LOFT: 56°
LIE: 63°
BOUNCE: 20°/10°
CLUB LENGTH: 35.25"
RAIL ANGLE: 12.5° OFFSET

GAP WEDGE

- 10° rail entry bounce combined with 6° of sole bounce
- Straight rails align with a square head through impact

GAP WEDGE

WEIGHT: 300G
LOFT: 51°
LIE: 63°
BOUNCE: 10°/6°
CLUB LENGTH: 35.50"
RAIL ANGLE: STRAIGHT

ALL RAKES FEATURE

- FITTING: RIGHT OR LEFT HAND
- SHAFT: WEDGE FLEX STEEL OR GRAPHITE
- GOLF GRIPS: PATENTED AIR-CUSHION GRIP FOR THE ULTIMATE FEEL
- COVERS: ON ALL RAKE HEADS

LOB, SAND AND GAP RAKE WEDGE FEATURES AND BENEFITES

RAIL DESIGN

- Cleanly combs through the sand and rough without getting stuck or digging
- Gives sand/rough somewhere to go - thus less effort
- Rails stabilize the club head at impact - assisting it from twisting or turning

MILLED FACE AND GROOVES

- Milled face provides additional spin and control
- Precise groove geometry - conforms with USGA and R&A Rules
- Precise grooves and groove volume provide spin in all conditions

SPECIFIC TO LOB AND SAND RAKES

ZERO HEEL BOUNCE

- Zero heel bounce enables the club face to open whilst maintaining the leading edge flush with ground
- 310 gram head-weight helps increase acceleration with less effort

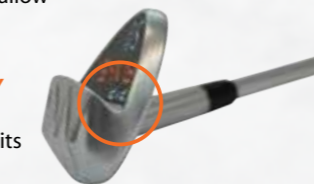

ADVANCED ON-SET LEADING EDGE

- Provides crisp contact from tight and hardpan lies
- Club-head enters the hitting area sooner than a standard wedge providing accuracy and crisp contact
- Club-head design creates a more shallow pathway through sand and rough

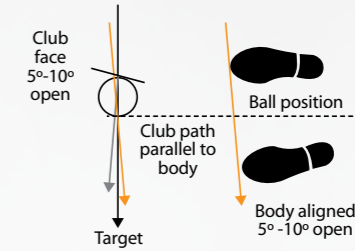

UNDERCUT CAVITY

- Provides forgiveness on off-centre hits
- Enables high launch trajectory

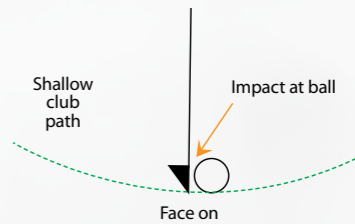

How to use the PnP RAKE wedges

LOB - TURF/ROUGH SHOT

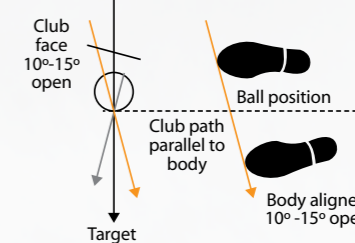

Plan view - Right hand
Slice through the turf or sand with club face, feet, hips and shoulders all open approx 5°-10°. Club path to follow open stance.

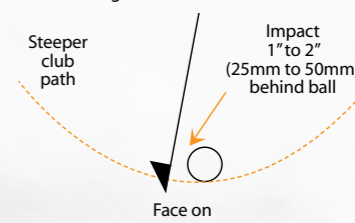

Side view - Right hand
Hit down onto the back of the ball. The off-set rail design with the on-set leading edge will get the ball up high and stop quickly due to the milled face.

SAND - BUNKER SHOT

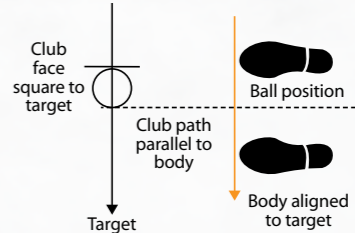

Plan view - Right hand
Slice through sand with the club face, feet, hips and shoulders all open approx 10°-15°. Club path to follow open stance.

Side view - Right hand
Hit down into the sand in a slicing action to let patented rails and central bounce work together. The club will then comb through the sand, helping the ball in the air.

GAP - TURF

Plan view - Right hand
Assume your regular setup when addressing the ball. Play your normal short-iron swing and make contact directly to the ball. Club path to follow square stance.

NOTE: Both Lob and Sand Rakes can be used in each others role, however, each club is designed to give the optimum result in their specific role.
