sales@jokermachine.com, www.jokermachine.com

No additional electrical equipment is required when using LED lights on Indian Motorcycles.

RECOMMENDED:

- Solder all wires for better installation results.
- Use 1/4" heat shrink.

Disconnect battery before beginning installation.

Installation

1. Unplug and remove stock turn signals.
2. Cut the wire a few inches above the plug coming from the stock turn signals. You are going to reuse the plug.
3. Run wires from Joker Machine turn signals thru the Joker Rear Turn Adapter Plate, Indian license plate bracket, and turn signal mounting bolt in that order.
4. Solder wires to plug as shown in diagram covering with heat shrink. Quick connects or butt connectors will also work.
5. Plug in new lights to factory turn signal plug and fasten to license plate bracket with turn signal mounting bolt using blue Loctite.
