

Switching the reeds. The frequency with which the reeds need to be switched determines the intensity of the fragrance, the more they are switched, the stronger the fragrance. To moderate the fragrance's diffusion, you may turn only a few reeds at a time.

The duration of the fragrance. The dimensions of the space, high temperature, direct sunlight, and exposure to air currents are all factors that can accelerate the evaporation and therefore reduce the duration of the fragrance. Position the diffuser away from light, heat sources and currents and evaluate its location according to the dimensions of the space.

Suggestions for an endless fragrance. In order to prolong the duration and reduce the evaporation of the fragrance, it is recommended to keep the liquid in the bottle at the level of the curve. It is sufficient to purchase a refill of the same fragrance and pour it frequently into the bottle.
