Lighter   Darker   Start   Profile   Menu

1

Press ▶ to load
K-logic classic

Select and load your profile. Press ▶ as if you were starting your roast.
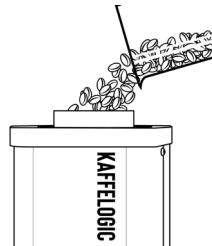

2

Select load size
[120g] then ▶

You will be prompted to select a batch size to roast. Use the — and ✚ buttons to increase or decrease your batch size.
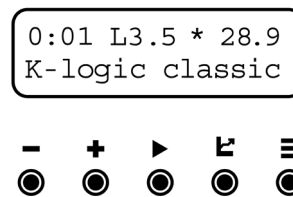

3

Using a scale weigh out your coffee to the same weight as your batch size selected into the provided beaker.

4

Dose your weighed out coffee from the beaker into your roaster. If you are roasting larger batches, attach the BOOST ring.

5

0:01 L3.5 * 28.9
K-logic classic

Press ▶ to begin the roast.

FURTHER INFORMATION

- The included BOOST ring is a chamber extension that will stop some beans falling out at higher batches. You can roast smaller batches without it.
- If you want to roast a standard, or "non-boost" roast, select the 120g batch size and roast as normal.
- You can return to the profile screen and by pressing the ⊵ button.
- When roasting larger batches remove the chaff collector over a bean tray/bowl to catch any beans that fall above the BOOST ring.
